

SACRAMENTO METROPOLITAN

**AIR QUALITY**  
MANAGEMENT DISTRICT

# Over \$4 Million for Sacramento Farmers

## Sac Metro Air District Helping to Clean the Air

The Sac Metro Air District is working to help Sacramento County farmers replace their old, diesel heavy-duty trucks and off-road farm equipment with brand new, clean diesel technology. Replacing this equipment is one of the most important ways our region can reduce pollution and avoid future regulation. With over \$4,000,000 available, we are ready to work with our farmers to make this happen.

## Eligible Equipment

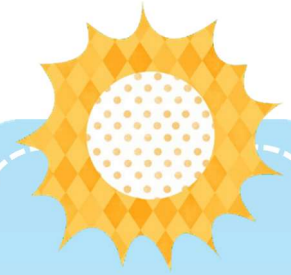

**On-Road, Heavy-Duty Trucks:** Trucks or engines must be 2009 and older with a Gross Vehicle Weight Rating (GVWR) over 14,000 lbs. and registered in Sacramento County. The vehicle must also be registered and compliant with the Air Resources Board Truck & Bus Regulation requirements by January 1, 2020. Funding may be available for up to 65% of the cost of a new truck.

**Farm Equipment:** Old tractors or other mobile equipment must be Tier 3 or older with a diesel engine over 25 horsepower. Funding is based on the annual hours of operation over the previous 24 months. Projects must have documentation and a functional hour meter to qualify. Funding may be available for up to 80% of the cost of a new Final Tier 4 replacement.
