AUTHORITY TO CONSTRUCT EVALUATION

APPLICATION NO.: A/C 25800, 25801

REVIEW STARTING DATE: 07/30/18

ISSUING ENGINEER: Brian Krebs

I. PROJECT DESCRIPTION:

FACILITY NAME: Cosumnes Power Plant

LOCATION: 14295A Clay East Road, Herald, CA

PROPOSAL: Authority to Construct and Permit to Operate modifications to CT No. 3 (A/C 25800 modifying P/O 22674 and incorporating A/C 25510) and CT No.2 (A/C 25801 modifying P/O 22673 and incorporating A/C 25511).

INTRODUCTION: The Sacramento Municipal Utility District Financing Authority (SFA) operates an electrical generation power plant that is referred to as the Cosumnes Power Plant (CPP) at the above address. SFA operates the facility under a Title V permit and an approved Application of Certification by the California Energy Commission. SFA is proposing to upgrade the existing GE Model 7FA combustion turbines with the GE "Power FlexEfficiency Package" consisting of Advanced Gas Path (AGP) and Dry-Low-NOx2.6+ (DLN2.6+) equipment; this project is referred to as the Gas Turbine Performance Upgrade Project (the Project). These proposed performance upgrades include increased MW output and improved efficiency due to higher gas turbine firing temperatures made possible by improved cooling, coatings, and sealing of the power turbine. In addition, the DLN2.6+ performance upgrades include the use of improved turbine blade aerodynamic shape for increased airflow and efficiency.

SFA's overall goal for this Project is to increase the efficiency and firing rate of each turbine such that the overall CPP generating capacity increases.

- > The CT maximum heat input rate will increase from its current rating of 1865 MMBtu/hr to 2200 MMBtu/hr (18% increase).
- CPP's overall power output rating will increase from its current rating of 530 MW to 603.2 MW (14% increase).
- The individual CT name plate rating will increase from its current rating of 170 MW to 198.1 MW (17% increase).
- > The 2-on-1 steam generator rating will increase from its current rating of 190 MW to 207 MW (9% increase).

The economics and timing of the Project required that installation of the upgraded components commence in April 2018 for CT No. 3. Failure to receive authorization prior to the April 2018 maintenance window would require that the whole project be postponed to the next major maintenance outage in 2021. Therefore, in order to assure adequate permit processing time, SFA is permitting the Project in two phases.

> Phase 1: Was to allow the installation of the turbine upgrade components at CT No. 2 and CT No. 3 without increasing turbine emissions or firing rate, and restricting emission rates

such that BACT and offsets are not triggered (i.e., operating the turbine in a reduced fire or governed state). Due to the relative simplicity of not triggering BACT or offsets for Phase 1, the permitting was accomplished for the physical installation of hardware by the April 2018 outage. Authorities to Construct were issued for the turbine upgrades (A/Cs 25510 and 25511) and new CO oxidation catalysts (A/Cs 25634 and 25635) for CT Nos. 2 and 3, respectively.

Phase 2: Is to allow a proposed increase in CT No. 2 (A/C 25801) and CT No. 3's (A/C 25800) firing rate and emissions that are possible after the physical hardware allowed in Phase 1 is installed. Phase 2 is the subject of this permitting action.

As Phase 1 and Phase 2 were always one project, these Authorities to Construct will incorporate the Phase 1 requirements and once issued, A/C's 25510 and 25511 will be cancelled.

In order to not be considered a major modification, the facility will also be taking a yearly NOx facility limit of 192,000 lb/yr and CO facility limit of 246,200 lbs/yr. (See Appendix A)

EQUIPMENT DESCRIPTION:

A/C 25800	Gas Turbine, No. 3, General Electric, Model 7FA, Combined Cycle, 2,200 MMBTU/hr Heat Input, 198.1 MW Nominal Rating, Fueled by Natural Gas/Digester Gas
A/C 25801	Gas Turbine, No. 2, General Electric, Model 7FA, Combined Cycle, 2,200 MMBTU/hr Heat Input, 198.1 MW Nominal Rating, Fueled by Natural Gas/Digester Gas

PROCESS RATE/FUEL USAGE:

Each turbine will be limited to a total of 2,200 MMBTU/hr heat input. In addition to the individual maximum firing rate of each turbine, the maximum amount of digester gas that can be combusted in the turbines will continue to be limited to 2,500 scfm.

OPERATING SCHEDULE: There are no restrictions on the operating schedule of the turbines. They are permitted to operate at all times.

CONTROL EQUIPMENT EVALUATION:

The turbines employ the following control technology and will meet the following requirements:

VOC	1.17 ppmvd corrected to 15% O2, 3-Hr average, utilizing an Oxidation
	Catalyst
NOx	2.0 ppmvd corrected to 15% O2, 1-Hr average
SOx	Natural gas or equivalent that meets 0.7 gr Sulfur/100 scf
PM10	Natural gas or equivalent fuel that meets 0.7 gr Sulfur/100 scf with an air inlet
	filter cooler and lube oil vent coalescer.
PM2.5	Natural gas or equivalent fuel that meets 0.7 gr Sulfur/100 scf with an air inlet
	filter cooler and lube oil vent coalescer.
CO	4.0 ppmvd corrected to 15% O2, 1-Hr average utilizing an Oxidation Catalyst

II. EMISSIONS CALCULATIONS:

1. **HISTORIC POTENTIAL EMISSIONS**: The equipment is being evaluated as existing emission units (P/O 22673 and 22674); therefore its Historic Potential Emissions are as follows (Rule 202, §225):

Historic Potential Hourly Emissions – Normal Operation							
Pollutant	CT No. 2	CT No. 3					
Tondant	(lb/hour)	(lb/hour)					
VOC	3.30	3.30					
NOx	13.51	13.51					
Sox	1.67	1.67					
PM10	9.00	9.00					
PM2.5	8.98 (A)	8.98 (A)					
CO	16.46	16.46					

(A) These turbines were permitted at a time when PM2.5 was not a regulated pollutant and as such daily PM2.5 emissions were not specified. However, when the final permit was issued in 2013, PM2.5 was added to the quarterly facility totals for inventory purposes. PM2.5 emissions were based on a 0.998 PM2.5 to PM10 fraction. Therefore, the hourly PM2.5 emissions will be assumed to be 8.98 lb/hr.

Historic Potential Daily Emissions – Including One 3-hour Startup							
Pollutant	CT No. 2	CT No. 3					
Foliutarit	(lb/day)	(lb/day)					
VOC	117.3	117.3					
NOx	523.7	523.7					
SOx	40.1	40.1					
PM10	216.0	216.0					
PM2.5	215.5 (A)	215.5 (A)					
CO	3,051.7	3,051.7					

(A) These turbines were permitted at a time when PM2.5 was not a regulated pollutant and as such daily PM2.5 emissions were not specified. However, when the final permit was issued in 2013, PM2.5 was added to the quarterly facility totals for inventory purposes. PM2.5 emissions were based on a 0.998 PM2.5 to PM10 fraction. Therefore, the daily PM2.5 emissions will be assumed to be 215.6 lb/day.

	Historic Potential Quarterly Emissions (A)									
Pollutant	Quarter 1 lb/quarter		Quarter 2 lb/quarter		Quarter 3 lb/quarter		Quarter 4 lb/quarter			
	CT No. 2	CT No. 3	CT No. 2	CT No. 3	CT No. 2	CT No. 3	CT No. 2	CT No. 3		
VOC	7,403	7,403	7,479	7,479	7,555	7,555	7,555	7,555		
NOx	31,010	31,010	31,321	31,321	31,632	31,632	31,632	31,632		
SOx	3,095	3,095	3,130	3,130	3,164	3,164	3,164	3,164		
PM10	19,440	19,440	19,656	19,656	19,872	19,872	19,872	19,872		
PM2.5	19,401	19,401	19,617	19,617	19,832	19,832	19,832	19,832		

		Historic Potential Quarterly Emissions (A)									
Pollutant	Quarter 1 ollutant lb/quarter		Quarter 2 lb/quarter		Quarter 3 lb/quarter		Quarter 4 lb/quarter				
	CT No. 2	CT No. 3	CT No. 2	CT No. 3	CT No. 2	CT No. 3	CT No. 2	CT No. 3			
СО	73,965	73,965	74,343	74,343	74,722	74,722	74,722	74,722			

(A) When the permits were written, the quarterly emissions reflected the entire facility emissions not the individual permitted units. However, the emissions in this table reflect the individual potentials to emit for CT No. 2 and CT No. 3 as calculated in the original evaluation (EV16006 & 16007) and amended during the SOx increase due to the introduction of digester gas (EV22674).

	Historic Potential Annual Emissions (A)								
Pollutant	CT No. 2 (TPY)	CT No. 3 (TPY)	CT No. 2 + CT No. 3 (TPY)	Cooling Tower (TPY)	Perlight Storage (TPY)	Total Facility (TPY)			
VOC	15.00	15.00	29.99	0.00	0.00	30.0			
NOx	62.80	62.80	125.60	0.00	0.00	125.6			
SOx	6.28	6.28	12.55	0.00	0.00	12.6			
PM10	39.42	39.42	78.84	1.71	0.01	80.6			
PM2.5	39.34	39.34	78.68	0.66	0.01	79.3			
СО	148.88	148.88	297.75	0.00	0.00	297.8			

⁽A) The annual emissions for the facility are depicted in P/O's 22673 and 22674. They are calculated from the quarterly emissions for turbines CT2 and CT3 added to the emissions from the cooling tower and the Perlite storage silo. The facility tons per year has been rounded to one decimal point.

2. PROPOSED POTENTIAL TO EMIT:

Proposed Potential Hourly Emissions – Normal Operation							
Pollutant	CT No. 2 (lb/hour)	CT No. 3 (lb/hour)					
VOC	3.30	3.30					
NOx	16.21	16.21					
Sox	1.91	1.91					
PM10	9.00	9.00					
PM2.5	8.98	8.98					
CO	19.73	19.73					

Proposed Potential Daily Emissions						
Pollutant	CT No. 2 (lb/day)	CT No. 3 (lb/day)				
VOC	117.3	117.3				
NOx	580.4	580.4				
SOx	45.8	45.8				
PM10	216.0	216.0				
PM2.5	215.5	215.5				
CO	3,120.3	3,120.3				

		Proposed Potential Quarterly Emissions							
Pollutant	Quarter 1 lb/quarter		Quarter 2 lb/quarter		Quarter 3 lb/quarter		Quarter 4 lb/quarter		
	CT No. 2	CT No. 3	CT No. 2	CT No. 3	CT No. 2	CT No. 3	CT No. 2	CT No. 3

со	123.10	123.10	123.10	0.00	0.00	123.1				

III. COMPLIANCE WITH RULES AND REGULATIONS:

1. H&S § 42301.6 (AB 3205) COMPLIANCE: The equipment is not located within 1,000 feet from the outer boundary of a school site. Therefore the school public noticing requirements of H&S Code § 42301.6 do not apply.

2. NSR COMPLIANCE:

Rule 202 - New Source Review

Since the modification is not considered a major modification for any pollutant (see Appendix A – Major Modification Applicability Determination), the following methodologies will be utilized.

Section 301 - Best Available Control Technology

BACT is triggered for any pollutant for which the emission increase (BACT_{EI}) calculated pursuant to Rule 202, Section 411.1 exceeds the levels specified below. For purposes of this calculation, the difference is done using tenths, then the difference is rounded to an integer using standard rounding convention (round up if greater than or equal to 0.5):

BACT is triggered if:

BACTEI > BACTTL

Where:

 $BACT_{EI} = Emissions Increase = (DPE - DHPE)$

DPE = Daily Potential Emissions (from Section II.2)

DHPE = Daily Historic Potential Emissions (from Section II.1)

BACT_{TL} = Pollutant **BACT**_{TL} VOC 0 lb/day NOx 0 lb/day SOx 0 lb/day CO 550 lb/day PM_{10} 0 lb/day PM_{2.5} 0 lb/day Lead 3.3 lb/day

Determination of BACT Applicability for each respective turbine:

Pollutant	DPE (lb/day)	DHPE	BACT _{EI} (lb/day)	BACT _{⊤L} (lb/day)	Is BACT Required?
VOC	117.3	117.3	0	>0	No
NOx	580.4	523.7	57	>0	Yes
SOx	45.8	40.1	6	>0	Yes
PM10	216.0	216.0	0	>0	No
PM2.5	215.5	215.5	0	>0	No
СО	3,120.3	3,051.7	69	>550	No
Lead	0	0	0	>3.3	No

The proposed NOx, and SOx emissions exceed the BACT trigger levels specified in this section and are therefore subject to BACT.

BACT for this project was determined to be the following (See BACT 203 in Appendix E):

	BACT (#203) COMBUSTION GAS TURBINE					
Pollutant	Standard	Compliance Demonstration				
VOC	1.0 ppmvd corrected to 15% O2, 3-Hr average, utilizing an Oxidation Catalyst	N/A – BACT was not triggered				
NOx	2.0 ppmvd corrected to 15% O2, 1-Hr average	The turbines are permitted to 2.0 ppmvd corrected to 15% O2, 1-Hr average, thus they meet this requirement				
SOx	Natural Gas or equivalent that meets 0.7 gr Sulfur/100 scf	The natural gas/digester gas mixture has an average sulfur content of approximately 0.28 gr Sulfur/100 scf, thus they meet this requirement				
PM10	Natural gas or equivalent fuel that meets 0.7 gr Sulfur/100 scf with an air inlet filter cooler and lube oil vent coalescer.	N/A – BACT was not triggered				
PM2.5	Natural gas or equivalent fuel that meets 0.7 gr Sulfur/100 scf with an air inlet filter cooler and lube oil vent coalescer.	N/A – BACT was not triggered				
2.0 ppmvd corrected to 15% O2, 1-Hr average utilizing ar Oxidation Catalyst		N/A - BACT was not triggered				

The applicant is proposing emission standards or equipment that meet the aforementioned BACT requirements. Therefore, these turbines comply with BACT.

<u>Section 302 – Offsets</u>: Offsets are triggered for any project where the stationary source potential to emit, calculated pursuant to Rule 202, Section 411.3 exceeds the levels specified below.

Pollutant	lb/qtr
VOC	5,000
NOx	5,000
SOx	13,650
PM10	7,300
PM2.5	15 TPY
CO	49,500

All units at this facility/stationary source were installed after January 1, 1977.

Pursuant to Section 411.3 offsets are triggered for VOC and NOx for all four quarters. Pursuant to Section 411.4, the amount of offsets that are required is determined by the potential to emit minus the Historic Actual Emissions. Since this modification is not considered major (see Appendix A - Major Modification Applicability Determination), then Historic Actual Emissions are equal to Historic Potential Emissions. The applicant is not requesting an increase in quarterly emissions from their existing permits, therefore, potential emissions minus Historic Potential Emissions is zero and offsets will not be required.

Offset Trigger Level		≥ 15	≥ 13,650	≥ 7,300	≥ 49,500	

Pursuant to Section 411.3 offsets are triggered for PM10, PM2.5, and CO for all four quarters. Pursuant to Section 411.4, the amount of offsets that are required is determined by the potential to emit minus the Historic Actual Emissions. Since this modification is not considered major (see Appendix A - Major Modification Applicability Determination), then Historic Actual Emissions are equal to Historic Potential Emissions. The applicant is not requesting an increase in quarterly emissions from their existing permits, therefore, potential emissions minus Historic Potential Emissions is zero and offsets will not be required.

Section 306 - Ambient Air Quality Standards

Section 306 prohibits a new or modified stationary source from interfering with the attainment or maintenance of an applicable ambient air quality standard. The table below shows the maximum ambient impacts for the project including the increases in hourly and daily emissions. The maximum ambient impacts remain below the applicable Federal or State ambient air quality standards. The detailed modeling outputs, operating scenarios, and background air quality data used in calculating these impacts are included in the application.

	Averaging	NAAQS		CAAQS		Modeled	Impacts	NAAQS Cumulative		CAAQS Cummulative	
Pollutant	Period	Standard	Units	Standard	Units	μg/m³	ppm	Impacts	Units	Impacts	Units
СО	1Hour	35	ppm	20	ppm	690.06	0.60	3.00	ppm	3.00	ppm

Section 308 -CEQA

The CPP underwent review/approval by the CEC as an Application for Certification (AFC) where the CEC process was determined to be CEQA equivalent. Because CPP underwent review/approval by the CEC as an Application for Certification (AFC), and this project will require amendment to this AFC, we expect that CEC staff will determine that this project will require CEC review, and this review will satisfy CEQA. Therefore, the SMAQMD will be required to issue a preliminary Authority to Construct which will act as a preliminary determination of compliance (PDOC) prior to issuing the final Authority to Construct permit for the Project which will act as a final determination of compliance (FDOC).

<u>Section 309 – Denial, Adverse Impact to Visibility of a Class I Area</u>

This section requires the Air Pollution Control Officer to deny an Authority to Construct or a Permit to Operate for a new major stationary source or major modification, if the Air Pollution Control Officer finds, after consideration of comments and an analysis from the Federal Land Manager, that the emissions from the proposed facility or modification would have an adverse impact on visibility of a Class 1 area pursuant to CFR Section 51.307(b).

Since this modification, at an existing major source, is not considered major (see Appendix A), this section does not apply.

Section 401 - Alternative Siting

Except as provided in Section 115, this section requires for major sources or major modifications for which an analysis of alternative sites, sizes, and production processes is required under Section 173(a)(5) of the Clean Air Act, the applicant provide an alternative siting analysis that is functionally equivalent to the requirements of Division 13 of the Public Resources Code. The Authority to Construct shall not be issued unless the Air Pollution Control Officer has concluded, based on the information contained in the alternative siting analysis, that the benefits of the proposed source significantly outweigh the environmental and social costs imposed as a result of its location, construction, or modification.

Section 115 states that this section does not apply if the application for Authority to Construct is not a Federal Major Modification. Since this modification is not considered major (see Appendix A), this section does not apply.

Section 404 – Enhanced New Source Review

The applicant has requested enhanced new source review. Therefore, this review will be subject to District Rule 207 Section 305 and Sections 401 through 408.

<u>Section 406 – Submittal of BACT Determinations:</u> This permitting action required a new BACT analysis for this source category. The BACT determination Gas Turbine - No. 203 will be submitted in accordance with the requirements of this section.

Section 413 - Sources Impacting Class 1 Areas

This section requires, for new major sources or major modifications that may affect visibility of a Class 1 area, the applicant to provide the Air Pollution Control Officer with an analysis of impairment to visibility that would occur as a result of the source or modification and general commercial, residential, industrial, and other growth associated with the project, as required by 40 CFR Section 51.307(b)(2) and 40 CFR Section 51.166.

Since this modification, at an existing major source, is not considered major (see Appendix A), this section does not apply.

Rule 203 – Prevention of Significant Deterioration

Except as provided in Rule 203, the provisions of Title 40 of the Code of Federal Regulations (CFR) Part 52.21 are incorporated by reference. The PSD program requires pre-construction review and permitting of new or modified major stationary sources of air pollution to prevent significant deterioration of ambient air quality. PSD applies to pollutants for which ambient concentrations do not exceed the corresponding National Ambient Air Quality Standards (i.e., attainment pollutants). For the proposed Turbine Upgrade Project, the emitted pollutants are NOx, SOx, CO, VOC, and PM₁₀/PM_{2.5} (greenhouse gas emissions have also been added to PSD per the tailoring Rule discussed below). While the SMAQMD is classified as an attainment area for NOx, SOx, CO, and PM₁₀, the SMAQMD is a nonattainment area with respect to the PM_{2.5} and ozone (VOC) National Ambient Air Quality Standards. Consequently, the PSD regulations do not apply to VOC and PM_{2.5} emissions from the project.

The federal PSD requirements apply on a pollutant-specific basis to any project that is a new major stationary source or a major modification to an existing major stationary source (these terms are defined in the PSD regulations at 40 CFR 52.21). CPP is an existing major source because its emissions are permitted to exceed 100 tons per year for NOx and CO. However, the actual-to-potential emissions will not exceed the significant increase thresholds for all PSD pollutants, and therefore PSD does not apply to the project. The table below compares the actual-to-potential emissions increase to the PSD significance thresholds for any PSD pollutants.

	PSD	Significant Increas	se Determination	n (TPY)	
Pollutant	CPP Actual Emissions	CPP Proposed Potential to Emit (A)	Actual to Potential Increase	Significant Increase Threshold	Significant Increase?
CO	23.2	123.1	99.9	100	NO
NOx	71.1	96.0	24.9	40	NO
SOx	N/A	16.7	16.7	40	NO
PM	66.5	80.6	14.1	25	NO
PM ₁₀	66.5	80.6	14.1	15	NO
PM2.5	N/A	N/A	N/A	10	N/A Non- attainment
Ozone	N/A	N/A	N/A	40	N/A Non- attainment
Lead	N/A	<0.6	N/A	0.6	NO
Fluorides	N/A	<3	N/A	3	NO
Sulfuric acid mist	N/A	<7	N/A	7	NO
TRS	N/A	<10	N/A	10	NO
Reduced Sulur	N/A	<10	N/A	10	NO

⁽A) See Appendix A for the basis of the Proposed Potential to Emit.

On June 3, 2010, EPA finalized the PSD greenhouse gas (GHG) "tailoring" regulation. The purpose of this regulation is to establish criteria to determine which new stationary sources and/or project modifications trigger PSD and Title V review due to increases in GHG emissions. Under the GHG Tailoring Rule and subsequent EPA guidance documents, beginning on July 1, 2011, existing major sources of GHG emissions such as CPP that undergo a modification that increases GHG emissions by 75,000 tons/year CO2e or more are subject to PSD review. However, the portion of the Tailoring Rule that would trigger PSD solely based on GHG emissions was overturned by the U.S. Supreme Court in June 2014. Thus, since PSD is not triggered by non-GHG pollutants, PSD does not apply to the project solely due to any GHG emissions increases. Therefore, with respect to GHG emissions under the overturned Tailoring Rule requirements, the proposed Project would not be subject to PSD review.

RULE 207 – Title V Federal Operating Permit Program

CPP has a Title V permit. Per Rule 214, Section 101.1, CPP has requested that this application be reviewed through the Enhanced New Source Review process. Consequently, the review of this application is subject to Rule 207, Section 305 and Sections 401 through 408. The Enhanced New Source Review process will allow the District to administratively amend the facility's Title V permit to reflect these changes at a later date.

<u>Section 305 – Title V Permit Content</u>

All the requirements and standards specified in this section are incorporated in the existing

Title V Permit and as applicable will be included in this application.

Section 401 through 408 – Administrative Requirements

This permit action will be processed using SMAQMD Rule 214 Section 404 Enhanced New Source Review. The procedural requirements in SMAQMD Rule 207 Sections 401 through 408 will be used. A public notice will be published in the Sacramento Bee requesting comments within a 30 day review period. The U.S. EPA Region 9 will have a 45 day review period.

The use of the Enhanced New Source Review process will allow this permit action to be incorporated into the facility's Title V permit through a Title V administrative permit amendment (see SMAQMD Rule 207 Section 202.5).

Prior to initial construction under this A/C, the applicant must submit a Title V application for an administrative amendment, and the following permit conditions will be listed on the A/C as follows:

- S3. This Authority to Construct has been reviewed through an Enhanced New Source Review process in accordance with the procedural requirements of Section 401 through 408 of Rule 207 Title V Federal Operating Permit Program.
- S4. The Sacramento Municipal Utility District Financing Authority must submit to the Air Pollution Control Officer an application to modify the Title V permit with an Administrative Title V Permit Amendment prior to commencing construction with modifications authorized by this Authority to Construct.

Rule 208 – Acid Rain

Rule 208 requires the CPP to hold emissions allowances for SOx and to monitor and report SOx, NOx, and CO₂ emissions. The current fuel supply for CPP is classified as "pipeline natural gas" and as such they are allowed to use a default emission factor for SOx. When digester gas is added to the natural gas, it will no longer qualify as "pipeline natural gas" or "natural gas". Therefore the facility will no longer be able to use the default SOx emission factor. Under the Acid Rain regulations, there are several options available to monitor/report SOx, NOx, and CO₂. CPP was granted an alternative SO2 monitoring plan specifically pertaining to the natural gas/digester gas monitoring requirements and it is incorporated into the Title V permit for the facility.

Rule 214 - Federal New Source Review

This rule applies to either new major stationary sources, or modifications to existing major stationary sources.

Section 301 - BACT

Since the modification is not considered a major modification for any pollutant (see Appendix A – Major Modification Applicability Determination), the following methodologies will be utilized.

BACT is triggered for any pollutant for which the emission increase (BACT_{EI}) calculated pursuant to Rule 202, Section 411.1 exceeds the levels specified below. For purposes of this calculation, the difference is done using tenths, then the difference is rounded to an integer using standard rounding convention (round up if greater than or equal to 0.5):

BACT is triggered if:

BACTEI > BACTTL

Where:

 $BACT_{EI} = Emissions Increase = (DPE - DHPE)$

DPE = Daily Potential Emissions (from Section II.2)

DHPE = Daily Historic Potential Emissions (from Section II.1)

 $BACT_{TL} =$ Pollutant **BACT**_{TL} VOC 0 lb/day NOx 0 lb/day SOx 0 lb/day CO 550 lb/day PM_{10} 0 lb/day 0 lb/day $PM_{2.5}$ Lead 3.3 lb/day

Determination of BACT Applicability for each respective turbine:

Pollutant	DPE (lb/day)	DHPE	BACT _{EI} (lb/day)	BACT _{TL} (lb/day)	Is BACT Required?
VOC	117.3	117.3	0	>0	No
NOx	580.4	523.7	57	>0	Yes
SOx	45.8	40.1	6	>0	Yes
PM10	216.0	216.0	0	>0	No
PM2.5	215.5	215.5	0	>0	No
СО	3,120.3	3,051.7	69	>550	No
Lead	0	0	0	>3.3	No

The proposed NOx and SOx emissions exceed the BACT trigger levels specified in this section and are therefore subject to BACT.

BACT for this project was determined to be the following (See BACT 203 in Appendix E):

BACT (#203) COMBUSTION GAS TURBINE				
Pollutant	Standard	Compliance Demonstration		
VOC	1.0 ppmvd corrected to 15% O2, 3-Hr average, utilizing an Oxidation Catalyst	N/A – BACT was not triggered		
NOx	2.0 ppmvd corrected to 15% O2, 1-Hr average	The turbines are permitted to 2.0 ppmvd corrected to 15% O2, 1-Hr average, thus they meet this requirement		
SOx	Natural Gas or equivalent that meets 0.7 gr Sulfur/100 scf	The natural gas/digester gas mixture has an average sulfur content of approximately 0.28 gr Sulfur/100 scf,		

		thus they meet this requirement
PM10	Natural gas or equivalent fuel that meets 0.7 gr Sulfur/100 scf with an air inlet filter cooler and lube oil vent coalescer.	N/A – BACT was not triggered
PM2.5	Natural gas or equivalent fuel that meets 0.7 gr Sulfur/100 scf with an air inlet filter cooler and lube oil vent coalescer.	N/A – BACT was not triggered
СО	2.0 ppmvd corrected to 15% O2, 1-Hr average utilizing an Oxidation Catalyst	N/A - BACT was not triggered

The applicant is proposing emission standards or equipment that meet the aforementioned BACT requirements. Therefore, these turbines comply with BACT.

 $\frac{Section\ 302-Offsets}{Offsets\ are\ triggered\ for\ modifications\ where\ the\ stationary\ source\ potential\ to\ emit,\ calculated}$ pursuant to Rule 214, Section 411.3 exceeds the levels specified below.

Pursuant to Section 411.3 offsets are triggered for VOC and NOx for all four quarters. Since this modification is not considered major (see Appendix A - Major Modification Applicability Determination), pursuant to Section 411.4, the amount of offsets that are required is determined by the potential to emit minus the Historic Potential Emissions. The applicant is not requesting an increase in quarterly emissions from their existing permits, therefore, potential emissions minus Historic Potential Emissions is zero and offsets will not be required.

Pursuant to Section 411.3 offsets are triggered for PM10 and PM2.5 for all four quarters. Since this modification is not considered major (see Appendix A - Major Modification Applicability Determination), pursuant to Section 411.4, the amount of offsets that are required is determined by the potential to emit minus the Historic Potential Emissions. The applicant is not requesting an increase in quarterly emissions from their existing permits, therefore, potential emissions minus Historic Potential Emissions is zero and offsets will not be required.

Section 306 – Ambient Air Quality Standards

See compliance determination in Rule 202, Section 306

Section 309 - Denial, Adverse impact to Visibility of a Class 1 Area

The section only applies for a new major source or major modification. Since this modification is not considered major (see Appendix A - Major Modification Applicability Determination), then this section does not apply.

Section 401 - Alternative Siting

The section only applies for a new major source or major modification. Since this modification is not considered major (see Appendix A - Major Modification Applicability Determination), then this section does not apply.

Section 404 – Enhanced New Source Review

The applicant has requested enhanced new source review. Therefore, this review will be subject to District Rule 207 Section 305 and Sections 401 through 408.

Section 413 - Sources Impaction Class I Areas

The section only applies for a new major source or major modification. Since this modification is not considered major (see Appendix A - Major Modification Applicability Determination), then this section does not apply.

Rule 217 - Public Notice Requirements for Permits

<u>Sections 401-402 – CARB, EPA, and Public Notification:</u> The public noticing requirements of Rule 217 do not apply if:

- Offsets are not required under Rule 202, Section 302.
- A visibility analysis is not required under Rule 214, Section 413.

• The increase in potential to emit for the project, calculated under Section 403 of Rule 217, is below the following limits:

Pollutant	_ <u>lb/qtr_</u>
VOC	5,000
NOx	5,000
SOx	9,200
PM10	7,300
PM2.5	10 TPY
CO	49,500

Analysis:

- As determined in Section III.2, offsets are not required.
- Though this permit action is subject to Rule 214, since this is not a new major source nor considered a major modification for any pollutant, the visibility analysis required by Section 413 of Rule 214 is not applicable.
- Since there is no quarterly emission increase, the increase in potential to emit does not exceed the notification exemption thresholds.

Though this modification is not required to conduct a public notice pursuant to Rule 217, nonetheless, this permit modification will be required to conduct a public notice as part of the Enhanced New Source Review process described in Rule 202, Section 404.

3. PROHIBITORY RULE COMPLIANCE:

Rule 401 - Ringelmann Chart

The permit will include conditions requiring that the turbines comply with the Ringelmann No. 1 or 20% opacity standard and in the District's experience, properly maintained turbines are able to meet this requirement. The equipment will be inspected prior to the issuance of the permit to operate and on a regular basis thereafter to ensure continuous compliance.

Rule 402 - Nuisance

This rule prohibits the discharge of air contaminants in quantities that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public. The SMAQMD regulates new and modified sources of TACs under this rule by implementing its "Risk Assessment Guidelines for New and Modified Stationary Sources," dated December 2000. These guidelines implement what is commonly known as "Toxics New Source Review."

Under the SMAQMD's toxics policy, modified projects with TAC emission increases are required to perform a screening-level health risk assessment. CPP was evaluated for health risk when it was originally permitted and the Phase 1 Turbine Upgrade Project. However, since this evaluation was performed under the previous risk assessment guidelines, a screening HRA utilizing the newer risk calculation methodologies will be performed here.

The health risk action levels and results are summarized below.

Health Risk Action Levels and Assessment Summary					
T (Health Dist	Permitting Thresholds ^(A)		Project HRA Results(B)		
Type of Health Risk	T-BACT	Maximum	Residential	Worker	
Cancer Risk (Chances per Million)	≥ 1.0	10.0	0.06	0.05	
Acute Non-Cancer (Hazard Index)	≥ 1.0	1.0	0.01	0.01	
Chronic Non-Cancer (Hazard Index)	≥ 1.0	1.0	0.001	0.01	

⁽A) In certain circumstances, the District may allow a health risk in excess of the levels specified here. For more information, see SMAQMD's guidance document, Health Risk Management Programs for Existing, Modified and New Stationary Sources (2016).

The following pollutants and their amounts were identified during the original permitting of the turbines while burning exclusively natural gas and have been evaluated in this analysis:

Pollutant	EF lb/MMCF (A)	lb/yr (E)	lb/hr (F)	Cancer	Acute	Chronic
Ammonia	1.37E01 (B)	261924.00	29.90000		Х	Х
Propylene	7.71E-01 (C)	13980.70	1.59597			Х

- (A) From AP-42 Table 3.1-7, 4/00
- (B) From AP-42 Table 3.1-8, 4/00
- (C) Based on hourly emission rate at 8760 hrs/year
- (D) Based on digester gas fuel flow of 1250 cfm for each turbine (2500 cfm total).

The following factors, formulas, and assumptions were taken into consideration in order to estimate the worst case excess cancer risk and the non-cancer health risks for the toxic pollutants emitted.

The project's emissions are modeled with the use of an EPA approved air dispersion model to determine the concentrations of toxic pollutants at residential and non-residential receptors surrounding the project. The model used for this analysis is Lakes Environmental's AERMOD View, Version 9.4.0. The following parameters were used as inputs to the model for each turbine:

Release Height: 48.78 meters

Gas Exit Temperature: 212 °F

Stack Diameter: 5.64 meters
Gas Exit Flow Rate: 1,109,018 acfm

Nominal Emission Rate: 1.0 g/s

SMAQMD utilizes the California Air Resources Board's Hotspots Analysis and Reporting Program (HARP2), Version 18159 model which incorporates the health risk assessment methodologies from the "Risk Assessment Guidelines - Guidance Manual for Preparation of Health Risk Assessments" (February 2015).

CANCER RISK ASSESSMENT:

From equation 5.4.1.1 and 8.2.4 A:

Riskair = Cair * (BR/BW) * A * EF * CPF * ED/AT * (1E-06) * (GLC) * ASF * FAH

Where:

Riskair = Cancer risk from inhalation exposure

Cair = Concentration ($\mu g/m^3$)

(BR/BW) = Breathing Rate/Body Weight

= 361 (l/kg-day) 95%, 3rd Trimester = 1090 (l/kg-day) 95%, 0<2 yrs = 631 (l/kg-day) 80%, 2<9 yrs = 572 (l/kg-day) 80%, 2<16 yrs = 261 (l/kg-day) 80%, 16<30 yrs = 233 (l/kg-day) 80%, 16<70 yrs

= 230 (l/kg-day) 8 hr worker rate

A = Inhalation Absorption Factor (default = 1)

EF = Exposure Frequency

= 350 days for Res = 250 days for Non-Res

CPF = Cancer Potency Factor (kg-day/mg)

ED = Exposure Duration, 30 years Res, 25 years Non-Res

AT = Averaging Time, 25,550 days

ASF = Age sensitivity factor for a specified age group

FAH = Fraction of time spent at home (use 1 for children under 16

when a school is within a 1 in a million cancer risk isopleth)

= 0.85, 3rd Trimester = 0.85, 0<2 yrs

= 0.72, 2<9 yrs = 0.72, 2<16 yrs = 0.73, 16<30 yrs = 0.73, 16<70 yrs

(1E-06) = $(mg/1000 \text{ ug})*(m^3/1000 \text{ l})$

GLC = Ground Level Adjustment Factor

= 1.0 for resident

= $4.2 (7/5 \times 24/8)$ for worker for equipment that, although limited,

operates during normal work hours

CANCER RISK SUMMARY:

Permit No.	Receptor (Worst Case)	Excess Cancer Risk (risk in a million)
A/C 25800	Residential (Located at Receptor #567, UTM: 663288, 4243338)	0.06
& 25801	Non-Residential (Located at Receptor #64, UTM: 664227, 4245473)	0.05

NON-CANCER RISK ASSESSMENT: The chronic non-cancer health risk is determined for a given pollutant by dividing the pollutant's annual average ambient air concentration (ug/m³) by the chronic reference exposure level of that pollutant in order to obtain the chronic hazard index (HI). The acute non-cancer health risk is determined by dividing the pollutant's maximum hourly ambient air concentration (ug/m³) by the acute reference exposure level in order to obtain the acute hazard index (HI). In addition, each contaminant can affect different organs of the body and several compounds may affect common organs. Therefore, when there are multiple toxic compounds involved, the effects are additive for the common organs.

A list of chronic or acutely hazardous air contaminants may be found at the OEHHA website www.oehha.ca.gov. The method of calculating the HI numbers (Risk Assessment Guidelines) is also found at this website.

The hazard index for the organs affected are shown below:

	Target Organ Affects – Acute HI (Residential)											
Cardiovascular	Central Nervous System	eunwul	Kidney	⊘ii∨	Repro/Devel	Respiratory	Skin	Eye	Bone/Teeth	Endo	poola	
1.78E-04	1.85E-04	4.69E-04	Χ	1.63E-07	5.04E-04	5.01E-03	Χ	7.66E-03	Х	Χ	3.41E-04	

	Target Organ Affects - Chronic HI (Residential)											
Cardiovascular	Central Nervous System	əunwul	Kidney	۸IIÐ	Repro/Devel	Respiratory	Skin	Еуе	Bone/Teeth	Endo	Blood	
9.17E-04	9.18E-04	Χ	3.11E-06	3.03E-06	9.16E-04	1.21E-03	9.14E-04	2.30E-07	Х	4.00E-08	1.79E-05	

	Target Organ Affects – Acute HI (Non-Residential)											
Cardiovascular	Central Nervous System	Immune	Kidney	Gilv	Repro/Devel	Respiratory	Skin	Eye	Bone/Teeth	Endo	Blood	
2.14E-04	2.22E-04	5.64E-04	Х	1.96E-07	6.06E-04	6.03E-03	Х	9.21E-03	X	Х	3.78E-04	

	Target Organ Affects - Chronic HI (Non-Residential)											
Cardiovascular	Central Nervous System	eunwul	Kidney	۸۱۱۹	Repro/Devel	Respiratory	Skin	Еуе	Bone/Teeth	Endo	Blood	
7.30E-03	7.32E-03	X	3.07E-05	2.32E-05	7.31E-03	1.10E-02	7.28E-03	2.87E-06	X	4.99E-07	2.23E-04	

NON-CANCER RISK SUMMARY:

Permit No.	Receptor (Worst Case)	Hazard Index
	Residential - Acute (Located at Receptor #672, UTM: 663288, 4243546	0.01
A/C 25800	Residential - Chronic (Located at Receptor #567, UTM: 663288, 4243338)	0.001
& 25801	Non-Residential - Acute (Located at Receptor #6, UTM: 663977, 4246040)	0.01
	Non-Residential – Chronic` (Located at Receptor #64, UTM: 664227, 4245473)	0.01

HRA CONCLUSION: The health risk for this project is considered acceptable to the SMAQMD because:

- The evaluated cancer risk for a maximum exposed individual resident (MEIR) is 0.06 in one million, which is below the significant risk threshold. Since the cancer risk is below 1 in one million, T-BACT is not required.
- The evaluated cancer risk for a maximum exposed individual worker (MEIW) is 0.05 in one million, which is below the significant risk threshold. Since the cancer risk is below 1 in one million, T-BACT is not required.
- The evaluated noncancer Acute Hazard Index is less than one for the maximum exposed individual resident (MEIR) and the maximum exposed individual worker (MEIW).

• The evaluated noncancer Chronic Hazard Index is less than one for the maximum exposed individual resident (MEIR) and the maximum exposed individual worker (MEIW).

Rule 406 - Specific Contaminants

The proposed equipment is not expected to exceed the emissions limit of 0.2% by volume sulfur compound as SO₂ and 0.1 gr/dscf for combustion contaminants calculated to 12% CO₂.

Natural Gas Fuel F-Factor = 8,710 dscf/MMBtu
Molar Volume = 385.3 ft3/mol
Natural Gas HHV = 1,000 BTU/lb
Conversion Factor = 7,000 gr/lb

PM10 Emission Factor = 0.00483 lb/MMBTU or 4.83 lb/MMCF SO₂ Emission Factor = 0.000868 lb/MMBTU or 0.868 lb/MMCF

Natural Gas Fuel Density = 44,582 lb fuel/MMCF Weight % C in Natural Gas = 76 % or 0.76 lb C/lb fuel

C to CO2 Conversion Efficiency = 0.995

PM10 Concentration (combustion contaminants):

- A. Calculate uncorrected grain loading
 - = (4.83 lb/MMCF) x (MMCF/1,000 MMBtu) x (7000 gr/lb) x (MMBtu/8,710 dscf)
 - = 0.003881745 gr/dscf
- B. Calculate CO₂ emission factor (lb CO₂/MMBtu) assuming 100% C to CO₂ conversion
 - = (0.76 lb C/lb fuel) x (mol C/12.01 lb C) x (mol CO₂/mol C) x (44.01 lb CO₂/mol CO₂) x (44,582 lb fuel/MMCF) x (MMCF/1,000 MMBtu)
 - = 124.159942 lb CO₂/MMBtu
- C. Calculate lb CO₂/MMBtu at 99.5% Conversion
 - = 124.159942 lb CO₂/MMBtu × 99.5%
 - = 123.539142 lb CO₂/MMBtu
- D. Calculate volume % of CO2 in Exhaust Gas
 - = % CO₂
 - = mol CO₂/mol exhaust
 - (123.539142 lb CO₂/MMBtu) x (mol CO₂/44.01 lb CO₂) x (MMBtu/8,710 dscf) x (385.3 dscf/mol exhaust)
 - = 0.12417497 mol CO₂/mol exhaust or 12.417497 % CO₂
- E. Calculate corrected grain loading
 - = (0.003881745 gr/dscf) x (12% CO₂/12.417497 % CO₂) 0.003751234 gr/dscf corrected to 12% CO₂

OR

Simplified Equation

- = (4.83 lb/MMCF) x (7000 gr/lb) x (0.12 mol CO₂/mol exhaust) x (lb fuel/0.76 lb C) x (12.01 lb C/mol C) x (mol C/mol CO₂) x (MMCF/44,582 lb fuel/) / (0.995) x (mol exhaust/385.3 dscf)
- = 0.003751234 gr/dscf corrected to 12% CO₂

SO2 Concentration (% SO₂ by volume):

The following calculation is at 0% excess air which represents worst case.

- = (0.868 lb SO₂/MMCF) x (MMCF/1,000 MMBtu) x (MMBtu/8,710 dscf) x (mol SO₂/64.06 lb SO₂) x (385.3 dscf/mol exhaust)
- = 0.000000599 mol SO₂/mol exhaust or 0.0000599 % SO₂

The rule emission limits for SO₂ and PM are 0.2% SO₂ by volume and 0.1 grains/cf at 12% CO₂, respectively. Therefore, the emissions from the turbine comply with Rule 406.

Rule 413 – Stationary Gas Turbines

Rule 413 prohibits NOx emissions in excess of 9 ppmvd corrected to 15% O₂ based on a 15-min average, with exceptions for excursions, from gaseous fuel-fired turbines with a maximum electrical output rating of 10 MW or greater operating 877 hours or more per year. Rule 413 is applicable to the CPP turbines, which have a maximum electrical output rating of 198.1 MW and operate up to 8760 hours/year. At a permitted NOx concentration of 2 ppmv corrected to 15% O₂ averaged over one hour, the CPP turbines comply with Rule 413 NOx limit.

Rule 420 - Sulfur Content of Fuels

Rule 420 limits the sulfur content of any gaseous fuel to 50 grains per 100 cubic foot, calculated as H2S. The sulfur content of the blended fuel is expected to be no more than 0.28 grains per 100 cubic foot (92.63 MMBTU/hr of digester gas at 1 grain/100 ft3 and 2107.37 MMBTU/hr of natural gas at 0.25 grain/100 ft3). Therefore, the fuel utilized for the CPP turbines is expected to comply with the Rule 420 limits.

4. NSPS COMPLIANCE:

40 CFR 60 Subpart A – General Provisions

All affected sources are subject to the general provisions of NSPS Subpart A unless specifically excluded by the source-specific NSPS. Subpart A requires initial notification and performance testing, recordkeeping, monitoring; provides reference methods; and mandates general control device requirements for all other subparts as applicable. SFA will continue to meet all applicable requirements of the general provisions outlined in 40 CFR 60 Subpart A.

40 CFR Part 60 Subpart GG – NSPS for Stationary Gas Turbines

NSPS GG, Standards of Performance for Stationary Gas Turbines, applies to stationary gas turbines with a heat input at peak load equal to or greater than 10.7 gigajoules (10 MMBtu) per hour, based on the lower heating value of the fuel fired. The project is considered a "modification" under NSPS because it results in an increase in hourly emissions of a regulated NSPS pollutant per 40 CFR 60.14. Therefore, because this modification is taking place after February 18, 2005, these turbines will be subject to 40 CFR Part 60 Subpart KKKK - NSPS for Stationary Combustion Turbines.

40 CFR Part 60 Subpart KKKK - NSPS for Stationary Combustion Turbines

NSPS GG, Standards of Performance for Stationary Gas Turbines, applies to stationary gas turbines with a heat input at peak load equal to or greater than 10.7 gigajoules (10 MMBtu) per hour, based on the higher heating value of the fuel, which commenced construction, modification, or reconstruction after February 18, 2005. Since each of these turbines is rated at 2200 MMBTU/hr and the modification is after February 18, 2005 these turbines are subject to this subpart. The general compliance requirements for this subpart include:

- NOx concentration of 15 ppmvd corrected to 15% O2 while combusting natural gas.
- SOx emission rate of 0.060 lb SO2/MMBtu
- Operate and maintain the turbine, air pollution control equipment, and monitoring equipment in a manner consistent with good air pollution control practices for minimizing emissions at all times including during startup, shutdown, and malfunction.
- Use data to demonstrate that the fuel meets the potential sulfur emission requirement.

- Comply with semi-annual reporting requirements pursuant to §60.4380
- Conduct an initial and subsequent performance test for NOx in accordance with §60.4400
- Conduct an initial and subsequent performance tests for SOx in accordance with §60.4415

The turbines existing NOx emission concentrations and SOx emission rates are more stringent than the NSPS requirements. Conditions will be added, as needed, to ensure compliance with the operational, monitoring, reporting and testing requirements of this subpart.

40 CFR Part 60 Subpart TTTT – Standards of Performance for Greenhouse Gas Emissions for Electric Generating Units

NSPS TTTT, Standards of Performance for Greenhouse Gas Emissions for Electric Generating Units, applies to any steam generating unit, IGCC, or stationary combustion turbine that commenced construction after January 8, 2014 or reconstruction after June 18, 2014. In addition, this regulation also applies to any steam generating unit or IGCC that commenced modification after June 18, 2014. The combustion turbines at SFA were originally constructed prior to January 8, 2014 and though these turbines are being modified after the June 18, 2014 applicable modification date, the NSPS removed stationary combustion turbine from that requirement as long as the turbine does not combust solid fuel. As such, NSPS Subpart TTTT does not apply to the modification of these units at CPP.

5. NESHAP COMPLIANCE:

NESHAPs under 40 CFR, Part 61: The list of all adopted National Emission Standards for Hazardous Air Pollutants (http://yosemite.epa.gov/r9/r9nsps.nsf/ViewStandards?ReadForm&Part=61) were reviewed to determine if the proposed project is subject to one or more of these regulations. There are currently no 40 CFR, Part 61 NESHAPs applicable to this source category.

NESHAPs under 40 CFR, Part 63: Due to the District not being delegated for the Part 63 NESHAPs, all Part 63 NESHAPs are enforced as Air Toxics Control Measures (ATCMs). The list of all adopted National Emission Standards for Hazardous Air Pollutants (http://yosemite.epa.gov/r9/r9nsps.nsf/ViewStandards?ReadForm&Part=63) were reviewed to determine if the proposed project is subject to one or more of these regulations. No applicable provisions were identified:

6. ATCM COMPLIANCE: The list of all adopted Airborne Toxic Control Measures (http://www.arb.ca.gov/toxics/atcm/atcm.htm) was reviewed to determine if the proposed project is subject to one or more of these regulations. No applicable provisions were identified:

RECOMMENDATION: This turbine modification project will comply with all applicable District rules and regulations. An authority to construct for the modifications of the turbines should be issued to SFA with the following conditions.

Refer to conditions in Authority to Construct No. 25800, 25801

APPENDIX A

Major Modification Applicability Determination

In order to determine which calculation methodology to use for the BACT and offset trigger analysis, we must first determine if CPP is a "major stationary source" and then whether the project is a "major modification." The source is subject to both Rule 202 as well as 214 so the "major stationary source" determination must be determined for both rules.

Rule 202 CPP is a "major stationary source" per Rule 202, Section 228 for NOx, VOC, PM_{2.5}, and CO per the information presented below.

Pollutant	Major Source Threshold	CPP Permit Limit	Major Source?
VOC	25	30.0	YES
NOx	25	125.6	YES
SO ₂	NA	16.7	NO
PM ₁₀	100 (or 100 tpy SOx as PM10 precursor)	80.6	NO
PM _{2.5}	100 (or 100 tpy NOx or SOx as PM _{2.5} precursor) (A)	79.3	YES (NOx as PM _{2.5} precursor)
CO	100	297.8	YES

⁽A) At this time VOC and ammonia have not been determined to be a necessary part of the PM2.5 control strategy in the attainment demonstration nor have they been approved by EPA in the State Implementation Plan. As such they are not considered a PM2.5 precursor for the purposes of major stationary source threshold.

 $\frac{\text{Rule 214}}{\text{CPP is a "major stationary source" per Rule 214, Section 228 for NOx, VOC, and PM$_{2.5}$ per the information presented below.}$

Pollutant	Major Source Threshold CPP Permit Limit		Major Source?
VOC	25	30.0	YES
NOx	25	125.6	YES
SO ₂	NA	16.7	NO
PM ₁₀	100 (or 100 tpy SOx as PM10 precursor)	80.6	NO
PM _{2.5}	100 (or 100 tpy NOx or SOx as PM _{2.5} precursor) (A)	79.3	YES (NOx as PM _{2.5} precursor)
CO	NA	297.8	NA

⁽B) At this time VOC and ammonia have not been determined to be a necessary part of the PM2.5 control strategy in the attainment demonstration nor have they been approved by EPA in the State Implementation Plan. As such they are not considered a PM2.5 precursor for the purposes of major stationary source threshold.

The methodology for determining "major modification" is the same for either Rule 202 or 214. For those pollutants (NOx, VOC, PM2.5, and CO) for which the source is major, it must be determined whether the project is a "major modification" for these pollutants.

Emission increases are determined by the calculation method in Rule 202 or 214, Section 411.5: The sum of the Potential to Emit for the project minus the Historic Actual Emissions, as defined in Section 224.1, for the project. However, the potential to emit, instead of historic actual emissions, can be used for emissions units if either of the following conditions applies:

- a. Actual emissions are at least 80% of the potential to emit limit, or
- b. The emissions unit was fully offset for any emissions increase during the 5 year period prior to the date that the application is deemed complete.

Though the facility was fully offset for NOx, VOC, and PM10 (for which PM2.5 is a subset) during the original permitting of the project, this happened well over 5 years ago, thus Section 411.5 (b) is not satisfied.

In determining if the 80% criteria of Section 411.5 (a) is satisfied, we must first determine the appropriate historic actual emissions (baseline).

- 224.1 **Existing emissions units**: Historic actual emissions for the existing emissions unit averaged over the two year period immediately preceding the date of application for an Authority to Construct.
 - a. If the last two years are unrepresentative of normal source operations as determined by the Air Pollution Control Officer, then any two consecutive years of the last five years that represent normal source operation may be used.

In order to determine the appropriate two year period that represents normal source operations, the applicant in support of Phase 1 of the project provided the amount of energy produced by the facility in megawatt-hour for the previous five years (October 2012 through September 2017).

Appendix B includes the two-year baseline emissions calculation. As noted in Appendix B, when this baseline analysis was run for Phase I the previous two-year period ending September 2017 results in an average 12-month baseline of 4,785,735 MW-hr. The average 12-month baseline for the previous 60-month (five-year) period ending September 2017 is 5,214,630 MW-hr. In fact, the baseline of 4,785,735 for the previous two-year period ending September 2017 results in the lowest baseline value of the entire 5 year period. This time period included record rainfall and snowpack that resulted in an abundance of hydroelectric power which resulted in lower than normal power generation from these thermal assets. Therefore, the previous two-year period is "unrepresentative of normal source operations" pursuant to Rule 202, Section 224.1, and therefore the Project may use "any two consecutive years of the last 5-years that represent normal source operation."

Eight months later when Phase 2 was applied for, the previous two-year period immediately prior to the applications were even lower (4,439,482 MW-hr) as it also contained the record rainfall period along with a major shutdown. Therefore, since the previous two-year period is considered "unrepresentative of normal source operations" and since the two year period that was determined during the Phase 1 analysis is within 5 years of the Phase 2 applications, the same two-year period will be used.

The two-year period in the last five years that is most representative of normal operation is the two-year period ending February 2017. During this period the 24-month average power production was 5,209,784 MW-hr, which is closest to the 24-month average of 5,214,630 MW-hr over the entire 5 year period for the Phase 1 analysis.

Once the two-year baseline period was established, then historic actual emissions were determined for each pollutant and displayed in the table below.

Pollutant	CPP Actual Emissions Baseline (tpy)	CPP Potential to Emit Permit Limit (tpy)	Percent of Potential to Emit	Actual at Least 80% of PTE?
VOC	19.7	30.0	65.7%	NO
NOx	71.1	125.6	56.6%	NO
PM _{2.5}	66.4 (A)	79.3	83.7%	YES
CO	23.2	297.8	7.8%	NO

(A) PM2.5 emissions are the PM10 emissions multiplied by 0.998 PM2.5 to PM10 ratio.

Pollutant	Major Modification Threshold		Historical Actual Emissions (B)	Emission Increase (C)	Major Modification?
VOC	25	30.0	19.7	10.3	NO
NOx	25	96.0	71.1	24.9	NO
PM _{2.5}	10 (or 40 tpy NOx or SOx as PM _{2.5} precursor) (A)	79.3	79.3	0	NO
CO	100	123.1	23.2	99.9	NO

- (A) At this time VOC and ammonia have not been determined to be a necessary part of the PM2.5 control strategy in the attainment demonstration nor have they been approved by EPA in the State Implementation Plan. As such they are not considered a PM2.5 precursor for the purposes of major modification threshold.
- (B) As indicated in the table above, only PM2.5 satisfy the 80% criteria of Section 411.5(a) and as such the Historic Potential will be considered the Historic Actual.
- (C) The emission increase reflects increases only from this permitting action as no other creditable increase or decrease took place in the contemporaneous period.

For VOC, the emissions increase when comparing proposed potential to actual emissions results in only a 10.3 TPY increase and thus will not be considered a major modification for this pollutant.

For NOx SFA is proposing to reduce the potential to emit for this pollutant to avoid triggering the "major modification" determination based on the difference between historical actual and currently permitted potential emissions. Therefore, SFA will reduce the annual NOx emissions limit for the CPP facility from 125.6 tons/year (251,194 lb/yr) to 71.1 + 24.9 = 96.0 tons/year (192,000 lb/yr) and thus will not be considered a major modification for this pollutant.

For PM2.5, the emissions increase when comparing proposed potential to historic potential emissions results in a 0 TPY increase and thus will not be considered a major modification for this pollutant.

For CO SFA is proposing to reduce the potential to emit for this pollutant to avoid triggering the "major modification" determination based on the difference between historical actual and currently permitted potential emissions. Therefore SFA will reduce that annual CO emissions limit for the CPP facility from 297.8 tons/year (595,505 lb/yr) to 23.2 + 99.9 = 123.1 tons/year (246,200 lb/yr) and thus will not be considered a major modification for this pollutant.

Based on this analysis, the proposed modification is not considered a major modification for any pollutant and as such the calculation methodology used for determining BACT and/or Offset

triggers will be Proposed Potential minus Historic Potential (current permitted potential).

APPENDIX E BACT #203 Combustion Gas Turbine

UNDER PUBLIC REVIEW SMAQMD BACT CLEARINGHOUSE

CATEGORY: TURBINE

BACT Size: Minor Source BACT GAS TURBINE

BACT Determination Number: 203 BACT Determination Date:

Equipment Information

Permit Number: 25800

Equipment Description: GAS TURBINE

Unit Size/Rating/Capacity: Turbine, 2200 mmBTU/hr

Equipment Location: SMUD FINANCING AUTHORITY (COSUMNES POWER PLANT)

14295 CLAY EAST RD

HERALD, CA

BACT Determination Information

	-	
ROCs	Standard:	1.0 ppmvd @t 15% O2, 3-Hr Avg, Oxidation Catalyst
	Technology	Oxidation Catalyst
	Description:	
	Basis:	Achieved in Practice
NOx	Standard:	2.0 ppmvd @ 15% O2, 1-Hr Avg
	Technology	SCR or Equivalent
	Description:	
	Basis:	Achieved in Practice
SOx	Standard:	Natural Gas or Equiv. that meets 0.7 gr S/100scf
	Technology	
	Description:	
	Basis:	Achieved in Practice
PM10	Standard:	Natural Gas or Equiv. that meets 0.7 gr S/100scf
	Technology	
	Description:	
	Basis:	Achieved in Practice
PM2.5	Standard:	Natural Gas or Equiv. that meets 0.7 gr S/100scf
	Technology	
	Description:	
	Basis:	Achieved in Practice

BEST AVAILABLE CONTROL TECHNOLOGY DETERMINATION

	DETERMINATION NO.:	203
	DATE:	August 2, 2018
	ENGINEER:	Brian Krebs
Category/General Equip Description:	Combustion Gas Turbine	
	F-Class Combined Gas Tu	rbine Nominal rating
Equipment Specific Description:	of 198.1 MW	
Equipment Size/Rating:	Major Source BACT	
Previous BACT Det. No.:	N/A	

This Best Available Control Technology (BACT) determination category was determined under the project for A/C 25800 and 25801 (SMUD Cosumnes Power Plant (CPP). CPP is a combined cycle power plant that consists of two combined cycle combustion turbines, two unfired heat recovery steam generators, and one steam turbine. The combustion turbines utilize selective catalytic reduction for NOx control and an oxidation catalyst for CO and to a lesser extent VOC control.

BACT/T-BACT ANALYSIS

A: ACHIEVED IN PRACTICE (Rule 202, §205.1a)

The following technologies have either been currently employed as BACT/T-BACT for combustion gas turbines or are regulated by applicable District rules by the following agencies and air pollution control districts.

US EPA

RULE REQUIREMENTS

Rule 69.3 – Stationary Gas Turbine Engines – Reasonably Available Control Technology (12-16-98)

Pollutant	Standard
NOx (gaseous fuel)	42 ppmvd corrected to 15% O2 excluding startups
NOx (liquid fuel)	65 ppmvd corrected to 15% O2 excluding startups

Startup
Startup - a maximum of 2 hrs unless an extended startup is authorized

Rule 69.3.1 – Stationary Gas Turbine Engines – Best Available Retrofit Technology (02-24-10)

Pollutant	Standard
NOx (gaseous fuel)	9 ppmvd X E/25 corrected to 15% O2 excluding startups
NOx (liquid fuel)	25 ppmvd X E/25 corrected to 15% O2 excluding startups

E=(MRTE)(LHV)/(HHV)

Where:

E: "Unit Thermal Efficiency (E)" means the percent thermal efficiency of the gas turbine engine

MRTE: "Manufacturer's Rated Thermal Efficiency (MRTE)" means the manufacturer's continuous rated percent thermal efficiency of the gas turbine engine, including the effect of any air pollution control equipment if such equipment is installed, at peak load, after correction to lower heating value.

LHV: "Lower Heating Value (LHV)" means the total heat liberated, excluding the heat of condensation of water, per mass of fuel burned (Btu per pound) when fuel and dry air at standard conditions undergo complete combustion and all resultant products are brought to standard conditions.

HHV: "Higher Heating Value (HHV)" means the total heat liberated, including the heat of condensation of water, per mass of fuel burned (Btu per pound) when fuel and dry air at standard conditions undergo complete combustion and all resultant products are brought to standard conditions.

BACT Determination No. 203 Gas Turbine > 50 MW August 2, 2018 Page 6 of 19

Startup

Normal Startup - a maximum of 2 hrs unless an extended startup is authorized

Extended Startup - a maximum of 6 hrs for a combined cycle unit when the APCO determines that key parameters indicates that 2 hrs is not sufficient to meet the emission limits.

Discussion:

General

The various determinations above span many years. They represent various sizes, classes and manufacturer of the individual turbines. Each power plant in which these turbines are employed can be configured differently to meet the individual needs of the utility and in many cases these factors as well as the previous ones mentioned make it difficult to compare. Many times the emission rates that ultimately are reported as BACT are not a result of a specific technology or control, but rather represents the applicants willingness to accept a smaller compliance margin in order to lessen the permitting burden (availability and cost of emission offsets, CEQA, Major source or PSD thresholds, etc..). For a few pollutants, NOx, VOC and CO, good combustion design and practices can be combined with actual control technology such as Selective Catalytic Reduction or an Oxidation Catalyst to result in lower emissions of these respective pollutants. For particulate, emissions rates are influenced primarily by the fuel quality, combustion design

BACT Determination No. 203 Gas Turbine > 50 MW August 2, 2018 Page 10 of 19

and emission monitoring precision. For SOx, the emission rates are almost exclusively related to the sulfur content of the fuel which for all of the turbines listed above were from combusting various qualities of natural gas.

VOC

The most stringent VOC concentration reported for all of the projects analyzed was 0.3 ppmvd corrected to 15% O2, 3 hour average from the Chouteau Power Plant in Oklahoma. The turbine is a Siemens V84.3A rated at approximately 1882 MMBTU/hr. Though it appears to be similar in size, it is a different manufacturer and assuredly a different configuration. The CO emissions are listed at 8 ppm which is substantially higher than many of the others evaluated. This project is the only project of the top performing projects that does not utilize an oxidation catalyst which might explain the rather poor CO emission concentration. For these reasons, this BACT determination will not be considered achieved in practice for this application.

The next most stringent VOC emission concentration is 0.6 ppmvd corrected to 15% O2, 3 hour average at the Bear Mountain Limited power plant. This determination is for a GE LM5000 which is an aero-derivative turbine which is much smaller and not at all comparable to a frame turbine. As such, this BACT determination will not be considered achieved in practice for this application.

Several projects reported BACT determinations of 0.7 ppmvd corrected to 15% O2 for various averaging periods. None of these projects reported using the same manufacturer and class of turbine and as such, these BACT determinations will not be considered achieved in practice for this application.

Finally, the next most stringent standard was 1.0 ppmvd corrected to 15% O2 for various averaging periods. There were many projects that arrived at this BACT determination and a few of them reported this determination for General Electric 7FA turbines which are the same as the subject of this BACT determination. All of them utilized an oxidation catalyst. For this reason, a VOC BACT determination that requires an oxidation catalyst that results in a VOC concentration of 1.0 ppmvd corrected to 15% O2, 3-hour average will be considered achieved in practice.

NOx

The most stringent NOx concentration reported for all of the projects analyzed was 1.5 ppmvd corrected to 15% O2, 1 hour average from the IDC Bellingham LLC power plant project in Massachusetts. Conversations with the permitting authority indicated that the project was never built. As such, this BACT determination will not be considered achieved in practice for this application.

The next most stringent NOx emission concentration is 2.0 ppmvd corrected to 15% O2, 1 hour average. This was for many projects throughout the nation including the project for which is the subject of this BACT determination (CPP). All of the projects at this level utilize Selective Catalytic Reduction to achieve this level of NOx control. Though the projects analyzed all use SCR, SCONOx or perhaps other control technologies could potentially achieve similar results. For this reason, no specific control technology will be specified, but rather a NOx BACT determination that results in a NOx concentration of 2.0 ppmvd corrected to 15% O2, 1 hour average will be considered achieved in practice for this application.

BACT Determination No. 203 Gas Turbine > 50 MW August 2, 2018 Page 11 of 19

SOx

As mentioned previously, SOx emissions are directly related to the sulfur content of the fuel and all of the projects analyzed combust natural gas with sulfur contents that are contained in their local fuel supply. From all of the projects analyzed, the most stringent sulfur content specified was 0.4 gr S/100 scf of fuel. However, this was for a project in Redding CA, Three Mountain, 99-PO-01a which was not built¹. As such, this BACT determination will not be considered achieved in practice. The next most stringent sulfur content specified was 0.7 gr S/100 scf of fuel. The natural gas fuel supply for the CPP project meets this requirement. Therefore, a SOx BACT determination of natural gas fuel that meet 0.7 gr S/100 scf will be considered achieved in practice.

Particulate (PM10/PM2.5)

Again as mentioned previously, none of the projects utilize any type of add on control for particulate. Though all of the projects employ good combustion practices, some projects report lower particulate emission rates than others with similar equipment and fuel. This is just a function of the projects willingness to accept a lower compliance margin rather than any attempt at lower emissions. Therefore a specific emission rate will not be considered as achieved in practice.

All of the remaining determinations specify the combustion of a clean fuel (i.e. "natural gas"). In addition to the use of combusting natural gas or equivalent, the SJVAPCD identified two combustion practices that can be utilized to minimize particulate emissions. For these reasons, a Particulate (PM10/PM2.5) BACT determination of an air inlet filter cooler, lube oil vent coalescer, and the combusting of natural gas or equivalent will be considered achieved in practice.

CO

Two projects reported BACT determinations of 0.9 ppmvd corrected to 15% O2 without duct firing and 1.7 ppmvd corrected to 15% O2 with duct firing (CPV Towantic, LLC and Killingly Energy Center). Both projects are not operational yet and the turbines appear to be much larger. For these reasons, these BACT determinations will not be considered achieved in practice for this application.

The next most stringent CO emission concentration is 1.5 ppmvd corrected to 15% O2, 1 hour average for the Avenal Energy Project, Palmdale Hybrid Power Project, and the Warren County Power Plant – Dominion. All of the projects utilize an oxidation catalyst to achieve this level of CO control. The Avenal Energy Center and Palmdale Hybrid Power Project are not currently constructed¹. The Warren County Power Plant is a much larger turbine and has a higher emission limit when the unit is duct firing. For these reasons, this emission concentration is not considered achieved in practice for this application.

Lastly, a CO concentration of 2.0 ppmvd corrected to 15% O2, 1 hour average was found for several turbine projects. The Sand Hill Energy Center is a similar sized turbine, utilizes an oxidation catalyst, and does not have a less stringent limit while duct firing. For these reasons, a CO BACT determination that requires an oxidation catalyst that results in a CO concentration of 2.0 ppmvd corrected to 15% O2 will be considered achieved in practice.

¹ The California Energy Commission maintains a project status webpage for the California power plants under their jurisdiction https://www.energy.ca.gov/sitingcases/all_projects.html.

BACT Determination No. 203 Gas Turbine > 50 MW August 2, 2018 Page 12 of 19

START-UP's

Since the start-up provisions of the South Coast Rule 1134 only apply to turbines in existence prior to August of 1989 when the physical size of the units did not require extended start-up times, this start-up provision was not considered. A review of the rest of the start-up provisions of the District's rules determined that the start-up provisions of the current CPP turbine continue to be the most stringent.

BEST CONTROL TECHNOLOGIES - ACHIEVED IN PRACTICE				
Pollutant	Standard			
VOC	1.0 ppmvd corrected to 15% O2, 3-Hr average, utilizing an Oxidation Catalyst			
NOx	2.0 ppmvd corrected to 15% O2, 1-Hr average			
Sox	Natural Gas or equivalent that meets 0.7 gr Sulfur/100 scf			
PM10	Natural gas or equivalent fuel that meets 0.7 gr Sulfur/100 scf with an air inlet filter cooler and lube oil vent coalescer.			
PM2.5 (A)	Natural gas or equivalent fuel that meets 0.7 gr Sulfur/100 scf with an air inlet filter cooler and lube oil vent coalescer.			
СО	2.0 ppmvd corrected to 15% O2, 1-Hr average utilizing an Oxidation Catalyst			

(A) Assume same as PM10

B: TECHNOLOGICALLY FEASIBLE AND COST EFFECTIVE (Rule 202, §205.1.b.)

Technologically Feasible Alternatives:

Any alternative basic equipment, fuel, process, emission control device or technique, singly or in combination, determined to be technologically feasible by the Air Pollution Control Officer.

The table below shows the technologically feasible alternatives identified as capable of reducing emissions beyond the levels determined to be "Achieved in Practice" as per Rule 202, §205.1.a.

Pollutant	Technologically Feasible Alternative
voc	No other technologically feasible option identified (A)
NOx	No other technologically feasible option identified
SOx	No other technologically feasible option identified
PM10	No other technologically feasible option identified
PM2.5	No other technologically feasible option identified

BACT Determination No. 203 Gas Turbine > 50 MW August 2, 2018 Page 13 of 19

СО	No other technologically feasible option identified (A)

(A) The SJVAPCD identified technologically feasible emission standards for both VOC and CO. However in both cases, the standards selected for Achieved in Practice were found to be more stringent.

Cost Effective Determination:

Since no other technologies were determined to be technologically feasible, a cost analysis is not applicable.

CONCLUSION

Therefore, no identified technologically feasible controls are considered.

C: SELECTION OF BACT

BACT (#203) COMBUSTION GAS TURBINE				
Pollutant	Standard			
voc	1.0 ppmvd corrected to 15% O2, 3-Hr average, utilizing an Oxidation Catalyst			
NOx	2.0 ppmvd corrected to 15% O2, 1-Hr average			
SOx	Natural Gas or equivalent that meets 0.7 gr Sulfur/100 scf			
PM10	Natural gas or equivalent fuel that meets 0.7 gr Sulfur/100 scf with an air inlet filter cooler and lube oil vent coalescer.			
PM2.5	Natural gas or equivalent fuel that meets 0.7 gr Sulfur/100 scf with an air inlet filter cooler and lube oil vent coalescer.			
СО	2.0 ppmvd corrected to 15% O2, 1-Hr average utilizing an Oxidation Catalyst			

D: SELECTION OF T-BACT

No T-BACT determinations were identified. However since the majority of the risk is expected to be from VOC's, the VOC BACT determination will be considered to be T-BACT
