Comments: For emergency engines 50 ≤ bhp < 75, Tier 4 Interim certification is the requirement; for emergency engines 75 ≤ bhp < 750, Tier 3 certification is the requirement; for emergency engines ≥ 750 bhp, Tier 2 certification is the requirement.

BEST AVAILABLE CONTROL TECHNOLOGY DETERMINATION

	DETERMINATION NO.:	172
	DATE:	March 1, 2018
	ENGINEER:	Matt Baldwin
Category/General Equip Description:	Internal Combustion (I.C.) Engin	e
Equipment Specific Description:	I.C. Engine, Standby, Diesel-fue	led
Equipment Size/Rating:	Minor Source BACT	
Previous BACT Det. No.: No. 116		

This BACT determination will update the following determinations:

#116 which was made on January 14, 2016 for diesel standby I.C. engines BHP \ge 50

This BACT determination is being updated in accordance with District Policy to review BACT determinations once every two (2) years.

BACT/T-BACT ANALYSIS

A. ACHIEVED IN PRACTICE (Rule 202, §205.1a):

The following control technologies are currently employed as BACT/T-BACT for diesel-fueled standby engines by the following agencies and air pollution control districts:

Note: Diesel PM is the primary driver for health risks associated with diesel engines. Diesel PM is emitted as PM10 and PM2.5, and the same control technologies that control PM10 and PM2.5 also control diesel PM.

US EPA			
BACT Source: EF	PA RACT/BACT/LAER Clearinghouse		
For Stand	by Units With a Rating of 50 ≤ BHP < 175		
VOC	N/A – No BACT determinations found in the 50 \leq BHP $<$ 175 range		
NOx	N/A – No BACT determinations found in the 50 \leq BHP $<$ 175 range		
SOx	N/A – No BACT determinations found in the 50 \leq BHP $<$ 175 range		

US EPA	
PM10	N/A – No BACT determinations found in the 50 \leq BHP < 175 range
PM2.5	N/A – No BACT determinations found in the 50 \leq BHP $<$ 175 range
со	N/A – No BACT determinations found in the 50 \leq BHP < 175 range
RBLC ID:	See Attachment A
For Stand	by Units With a Rating of 175 ≤ BHP < 750
VOC	4.0 g/KW-hr (3.0 g/hp-hr) NMHC + NOx; Emission Standards based on 40 CFR Part 60, Subpart IIII
NOx	4.0 g/KW-hr (3.0 g/hp-hr) NMHC + NOx; Emission Standards based on 40 CFR Part 60, Subpart IIII
SOx	Diesel fuel with a sulfur content no greater than 0.0015% by weight
PM10	0.20 g/KW-hr (0.15 g/hp-hr) PM10 (filterable); Emission Standards based on 40 CFR Part 60, Subpart IIII
PM2.5	0.20 g/KW-hr (0.15 g/hp-hr) PM2.5 (filterable); Emission Standards based on 40 CFR Part 60, Subpart IIII
СО	3.5 g/KW-hr (2.6 g/hp-hr) CO; Emission Standards based on 40 CFR Part 60, Subpart IIII
RBLC ID:	See Attachment A
For Stand	by Units With a Rating of BHP ≥ 750
VOC	6.4 g/KW-hr (4.8 g/hp-hr) NMHC + NOx; Emission Standards based on 40 CFR Part 60, Subpart IIII
NOx	6.4 g/KW-hr (4.8 g/hp-hr) NMHC + NOx; Emission Standards based on 40 CFR Part 60, Subpart IIII
SOx	Diesel fuel with a sulfur content no greater than 0.0015% by weight
PM10	0.20 g/KW-hr (0.15 g/hp-hr) PM10 (filterable); Emission Standards based on 40 CFR Part 60, Subpart IIII
PM2.5	0.20 g/KW-hr (0.15 g/hp-hr) PM2.5 (filterable); Emission Standards based on 40 CFR Part 60, Subpart IIII
СО	3.5 g/KW-hr (2.6 g/hp-hr) CO; Emission Standards based on 40 CFR Part 60, Subpart IIII
RBLC ID:	See Attachment A

T-BACT

There are no T-BACT standards published in the clearinghouse for this category, but the NESHAP standards (see 40 CFR, Part 63 standards below) represent Maximum Achievable Control Technology (MACT) or Generally Available Control Technology (GACT) for HAPs and can therefore be considered T-BACT.

RULE REQUIREMENTS:

<u>40 CFR Part 60 Subpart IIII – Standards of Performance for Stationary Compression Internal Combustion</u> <u>Engines</u>: This regulation applies to owners/operators of new stationary compression ignition engines that commenced construction after July 11, 2005. [40 CFR §60.4200]

40 CFR §60.4205(b)

Owners and operators of 2007 model year and later emergency stationary CI ICE with a displacement of less than 30 liters per cylinder that are not fire pump engines must comply with the emission standards

US EPA

for new nonroad CI engines in §60.4202, for all pollutants, for the same model year and maximum engine power for their 2007 model year and later emergency stationary CI ICE.

40 CFR §60.4205(c)

Owners and operators of fire pump engines with a displacement of less than 30 liters per cylinder must comply with the emission standards in Table 4 to this subpart, for all pollutants.

Note: The emission standards listed in Table 4 of Subpart IIII are the same as those listed in the Table below, except that fire pumps were given an additional three years to comply with those standards. As the date of this determination, new emergency use fire pumps are subject to the same emissions standards as emergency use non-fire pumps.

40 CFR §60.4202(a)(2)

For engines with a maximum engine power greater than or equal to 37 KW (50 HP), the certification emission standards for new nonroad CI engines for the same model year and maximum engine power in 40 CFR 89.112 (emission standards) and 40 CFR 89.113 (smoke standards) for all pollutants beginning in model year 2007.

40 CFR §89.112 Table 1: Emission Standards in g/kW-hr (g/hp-hr)					
Maximum engine power	Tier	Model year(s)	PM	NMHC + NOx	со
37≤kW<75 (50≤hp<100)	3	2008+	0.40 (0.30)	4.7 (3.5)	5.0 (3.7)
75≤kW<130 (100≤hp<175)	3	2007+	0.30 (0.22)	4.0 (3.0)	5.0 (3.7)
130≤kW<225 (175≤hp<300)	3	2006+	0.20 (0.15)	4.0 (3.0)	3.5 (2.6)
225≤kW<450 (300≤hp<600)	3	2006+	0.20 (0.15)	4.0 (3.0)	3.5 (2.6)
450≤kW<560 (600≤hp<750)	3	2006+	0.20 (0.15)	4.0 (3.0)	3.5 (2.6)
kW>560 (hp>750)	2	2006+	0.20 (0.15)	6.4 (4.8)	3.5 (2.6)

<u>40 CFR Part 63 Subpart ZZZZ – National Emissions Standards for Hazardous Air Pollutants for</u> <u>Stationary Reciprocating Internal Combustion Engines</u>: This regulation applies to new and existing stationary IC engines. New emergency engines that comply with 40 CFR 60 Subpart IIII already meet the requirements of this NESHAP, as noted below.

40 CFR §63.6590(c)

Stationary RICE subject to Regulations under 40 CFR Part 60. An affected source that meets any of the criteria in paragraphs (c)(1) through (7) of this section must meet the requirements of this part by meeting the requirements of 40 CFR Part 60 Subpart IIII, for compression ignition engines or 40 CFR Part 60 Subpart JJJJ, for spark ignition engines. No further requirements apply for such engines under this subpart.

(A) See Attachment B. Determinations are based on Engines that met Tier 1, 2, or 3 standards at the time of application.

T-BACT

There are no T-BACT standards published in the clearinghouse for this category, but the ATCM standards (see Rule Requirements Below) represent Best Available Control Technology for toxic air contaminants (TACs) and can therefore be considered T-BACT.

RULE REQUIREMENTS:

<u>Title 17, Cal. Code Regs. Sections 93115 through 93115.15 – Airborne Toxic Control Measure (ATCM)</u> <u>for Stationary Compression Ignition (CI) Engines</u>: This regulation applies to owners/operators of new and existing stationary compression ignition engines greater than 50 bhp.

§93115.6(a): New Emergency Standby Diesel-Fueled CI Engine Emission Standards.

- (1) At-School and Near-School Provisions. No owner or operator shall operate a new stationary emergency standby diesel-fueled Cl engine for non-emergency use, including maintenance and testing, during the following periods:
 (A) whenever there is a school sponsored activity, if the engine is located on school grounds, and
- (B) between 7:30 a.m. and 3:30 p.m. on days when school is in session, if the engine is located within 500 feet of school grounds. Section 93115.6(a)(1) does not apply if the engine emits no more than 0.01 g/bhp-hr of diesel PM.
- (3) New Engines: As of January 1, 2005, except as provided in section 93115.3, no person shall sell, offer for sale, purchase, or lease for use in California any new stationary emergency standby diesel-fueled CI engine that has a rated brake horsepower greater than 50 unless it meets the following applicable emission standards, and no person shall operate any new stationary emergency standby diesel-fueled CI engine that has a rated brake horsepower greater than 50, unless it meets all of the following applicable operating requirements and emission standards specified in 93115.6(a)(3).

(A) Emissions Standards and Hours of Operating Requirements.

- 1. New stationary emergency standby diesel-fueled engines (>50 bhp) shall:
 - a. meet the applicable emission standards for all pollutants for the same model year and maximum horsepower rating as specified in Table 1 Emission Standards for New

Air Resources Board (ARB)

Stationary Emergency Standby Diesel-Fueled CI Engines, in effect on the date of acquisition or submittal, as defined in section 93115.4, and

 b. after December 31, 2008, be certified to the new nonroad compression-ignition (CI) engine emission standards for all pollutants for 2007 and later model year engines as specified in 40 CFR, Part 60, Subpart III-Standards of Performance for Stationary Compression Ignition Internal Combustion Engines (2006);

Table 1: Emission Standards for New Stationary Emergency Standby Diesel-Fueled CI Engines – g/bhp-hr (g/kW-hr)

(kW>560)		2008+			2.6 (3.5)	

- (4) New Direct-Drive Emergency Standby Fire Pump Engines: Except as provided in section 93115.3, no person shall sell, offer for sale, purchase, or lease for use in California any new stationary emergency standby diesel-fueled direct-drive fire-pump CI engine that has a rated brake horsepower greater than 50 unless the fire-pump engine meets the applicable emission standards and certification requirements specified in section 93115.6(a)(4), and no person shall operate any new stationary emergency standby diesel-fueled direct-drive fire pump CI engine that has a rated brake horsepower greater than 50, unless it meets all of the applicable operating requirements and emission standards specified in 93115.6(a)(4).
 - (A) Standards and Hours of Operating Requirements.
 - 1. New direct-drive emergency standby diesel-fueled fire-pump engines (>50 bhp) shall:
 - a. meet the applicable emissions standards for all pollutants as specified in Table 2 Emissions Standards for New Stationary Emergency Standby Direct-Drive Fire Pump Engines for the model year and NFPA nameplate power rating; and
 - b. meet the new fire pump engine certification requirements and emission standards required by 40 CFR § 60.4202(d.) Standards of Performance for Stationary Compression Ignition Internal Combustion Engines (2006); and
 - c. not operate more than the number of hours necessary to comply with the testing requirements of the National Fire Protection Association (NFPA) 25 "Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems," 2002

Air Resources Board (ARB)

edition, which is incorporated herein by reference. This subsection does not limit engine operation for emergency use and for emission testing to show compliance with 93115.6(a)(4)

For Standby Units With a Rating of ≥ 50 HP			
VOC	Applicable NMHC + NOx emission standard for horsepower range based on Table 1: New Emergency Standby Diesel-Fueled CI Engines and Table 2: New Emergency Standby Direct-Drive Fire Pump Engines of the <u>ATCM for Stationary CI Engines</u> .		
NOx	Applicable NMHC + NOx emission standard for horsepower range based on Table 1: New Emergency Standby Diesel-Fueled CI Engines and Table 2: New Emergency Standby Direct-Drive Fire Pump Engines of the <u>ATCM for Stationary CI Engines</u> .		
SOx	Diesel fuel with a sulfur content no greater than 0.0015% by weight.		
PM10	Applicable PM emission standard for horsepower range based on Table 1: New Emergency Standby Diesel-Fueled CI Engines and Table 2: New Emergency Standby Direct-Drive Fire Pump Engines of the <u>ATCM for Stationary CI Engines</u> .		
PM2.5	Applicable PM emission standard for horsepower range based on Table 1: New Emergency Standby Diesel-Fueled CI Engines and Table 2: New Emergency Standby Direct-Drive Fire Pump Engines of the <u>ATCM for Stationary CI Engines</u> .		
со	Applicable CO emission standard for horsepower range based on Table 1: New Emergency Standby Diesel-Fueled CI Engines and Table 2: New Emergency Standby Direct-Drive Fire Pump Engines of the <u>ATCM for Stationary CI Engines</u> .		

T-BACT

I.C. Engines, Standby, Diesel-Fueled		
Diesel PM Applicable PM emission standard for horsepower range based on the ATCM for Stationary CI Engines		

RULE REQUIREMENTS:

None

South Coast AQMD

RULE REQUIREMENTS:

<u>Reg XI, Rule 1110.2 – Emissions From Gaseous- and Liquid-Fueled Engines</u> Standby Engines are exempt from the emission limitations of this rule.

<u>Reg XVI, Rule 1470 – Requirements for Stationary Diesel-Fueled Internal Combustion and Other</u> <u>Compression Ignition Engines</u>

This rule regulates criteria pollutants as well as diesel PM from stationary diesel engines. Rule 1470 is not a SIP-approved rule so the standards below will only be considered for purposes of establishing "achieved in practice" T-BACT control levels or techniques.

SCAQMD Rule 1470 Emission Standards – g/kW-hr (g/bhp-hr) Rule 1470 §(c)(2)(C)(vi) for PM Rule 1470 §(c)(2)(C)(vii), Table 2 for NMHC + NOx, and CO				
Maximum Engine Power	NMHC + NOx	СО	РМ	
50 < HP < 100 (37 < kW < 75)	4.7 (3.5)	5.0 (3.7)	(0.15)	
100 < HP < 175 (75 < kW < 130)	4.0 (3.0)	5.0 (3.7)	(0.15)	
175 < HP ≤ 750 (130 < kW ≤ 560)	4.0 (3.0)	3.5 (2.6)	(0.15)	
HP > 750 (kW > 560)	6.4 (4.8)	3.5 (2.6)	(0.15)	

For standby diesel fueled direct drive fire pump engines, SCAQMD Rule 1470 requires the engine to meet the same emission standards as Table 2 of the Stationary Diesel ATCM (Title 17, Cal. Code Regs., §93116(a)(4)).

Rule 1470, §§(c)(2)(A), (c)(2)(C)(iv), and (c)(2)(C)(v) place additional restrictions on engines located on school grounds, within 100 meters of a school, within 500 feet of a school, and within 50 meters of a sensitive receptor. For engines located within 100 meters of a school or on school grounds, the engine must emit diesel PM at a rate less than or equal to 0.01 g/hp-hr, unless the owner/operator accepts restrictions on non-emergency operation (7:30 a.m. to 4:30 p.m. when school is in session or during school activities) in most cases. New engines located within 500 feet of as school must meet an emission standard of 0.15 g/hp-hr and not operate for non-emergency use between the hours of 7:30 a.m. and 3:30 p.m. when school is in session. Except for replacement engines, new stationary emergency engines located within 50 meters of a sensitive receptor are required to meet Tier 4 PM standards for nonroad engines.

Diesel PM 0.15 g/bhp-hr

RULE REQUIREMENTS:

Reg 9, Rule 8 – Nitrogen Oxides and Carbon Monoxide from Stationary Internal Combustion Engines

Standby Engines are exempt from the emission limitations of this rule.

The following control technologies have been identified and are ranked based on stringency:

	SUMMARY OF ACHIEVED IN PRACTICE CONTROL TECHNOLOGIES
voc	 Applicable NMHC + NOx emission standard for horsepower range ^{(A),(B)} based on the ATCM for Stationary CI Engines. [ARB, SMAQMD, SCAQMD, SJVUAPCD, BAAQMD] Applicable NMHC + NOx emission standard for horsepower range based on 40 CFR 60 Subpart IIII [EPA]. No Standard [SDAPCD]
NOx	 Applicable NMHC + NOx emission standard for horsepower range ^{(A),(B)} based on the ATCM for Stationary CI Engines. [ARB, SMAQMD, SCAQMD, SJVUAPCD, BAAQMD] Applicable NMHC + NOx emission standard for horsepower range based on 40 CFR 60 Subpart IIII [EPA]. 6.9 g/bhp-hr or 535 ppmv [SDAPCD]
SOx	1. Diesel fuel with a sulfur content no greater than 0.0015% by weight [EPA, ARB, SMAQMD, SCAQMD, SJVUAPCD, SDAPCD, BAAQMD]
PM10	 Applicable PM emission standard for horsepower range ^{(A),(B)} based on the ATCM for Stationary CI Engines. [ARB, SMAQMD, SJVUAPCD, BAAQMD] Applicable PM emission standard for horsepower range based on 40 CFR 60 Subpart IIII or 40 CFR 63 Subpart ZZZZ, whichever is more stringent. [EPA] No Standard [SDAPCD]
PM2.5	 Applicable PM emission standard for horsepower range ^{(A),(B)} based on the ATCM for Stationary CI Engines. [SMAQMD] Applicable PM emission standard for horsepower range based on 40 CFR 60 Subpart IIII or 40 CFR 63 Subpart ZZZZ, whichever is more stringent [EPA] No Standard [ARB, SCAQMD, SJVUAPCD, SDAPCD, BAAQMD]
со	 Applicable CO emission standard for horsepower range ^{(A),(B)} based on the ATCM for Stationary CI Engines. [ARB, SMAQMD, SCAQMD, SJVUAPCD, BAAQMD] Applicable CO emission standard for horsepower range based on 40 CFR 60 Subpart IIII. [EPA] No Standard [SDAPCD]
Diesel PM (T-BACT)	 Compliance with SCAQMD Rule 1470^(C) [SCAQMD] 0.149 g/hp-hr if T-BACT is triggered for a direct-drive fire pump [SJVUAPCD] 0.15 g/bhp-hr for stationary emergency, non-agricultural, non-direct drive fire pump ≥ 50 BHP Applicable PM emission standard for horsepower range ^{(A),(B)} based on the ATCM for Stationary CI Engines. [ARB, BAAQMD, SJVUAPCD] Applicable PM emission standard for horsepower range based on 40 CFR 60 subpart IIII, 40 CFR 63 Subpart ZZZZ. [EPA]

(A) for non-direct drive fire pump emergency engines 50 ≤ bhp < 75, Tier 4 Interim certification is the requirement; for emergency engines 75 <= bhp < 750, Tier 3 certification is the requirement; for emergency engines => 750 bhp, Tier 2 certification is the requirement.

(B) for direct-drive fire pump emergency engines, the applicable standards are those listed in Table 2 of the Stationary Diesel ATCM (Title 17, Cal. Code Regs., §93116(a)(4))

(C) SCAQMD Rule 1470 requires new engines (as of January 1, 2013) located within 50 meters of a sensitive receptor that are not replacement engines to meet Tier 4 emission standards for PM.

BACT Determination I.C. Engine, Standby, Diesel-fueled March 1, 2018 Page 13 of 18

The following control technologies have been identified as the most stringent, achieved in practice control technologies:

BEST CONTROL TECHNOLOGIES ACHIEVED IN PRACTICE						
Pollutant	Standard	Source				
VOC	Applicable NMHC + NOx emission standard for horsepower range based on Table 1: New Emergency Standby Diesel-Fueled CI Engines and Table 2: New Emergency Standby Direct-Drive Fire Pump Engines of the <u>ATCM for Stationary CI Engines</u> .	ARB, SMAQMD, SCAQMD, SJVUAPCD, BAAQMD				
NOx	Applicable NMHC + NOx emission standard for horsepower range based on Table 1: New Emergency Standby Diesel-Fueled CI Engines and Table 2: New Emergency Standby Direct-Drive Fire Pump Engines of the <u>ATCM for Stationary CI Engines</u> .	ARB, SMAQMD, SCAQMD, SJVUAPCD, BAAQMD				
SOx	Diesel fuel with a sulfur content no greater than 0.0015% by weight.	EPA, ARB, SMAQMD, SCAQMD, SJVUAPCD, SDAPCD, BAAQMD				
PM10	Applicable PM emission standard for horsepower range based on Table 1: New Emergency Standby Diesel- Fueled CI Engines and Table 2: New Emergency Standby Direct-Drive Fire Pump Engines of the <u>ATCM for</u> <u>Stationary CI Engines</u> .	ARB, SMAQMD, SCAQMD, SJVUAPCD, BAAQMD				
PM2.5	Applicable PM emission standard for horsepower range based on Table 1: New Emergency Standby Diesel- Fueled CI Engines and Table 2: New Emergency Standby Direct-Drive Fire Pump Engines of the <u>ATCM for</u> <u>Stationary CI Engines</u> .	SMAQMD; EPA				
со	Applicable CO emission standard for horsepower range based on Table 1: New Emergency Standby Diesel- Fueled CI Engines and Table 2: New Emergency Standby Direct-Drive Fire Pump Engines of the <u>ATCM for</u> <u>Stationary CI Engines</u> .	ARB, SMAQMD, SCAQMD, SJVUAPCD, BAAQMD				
Diesel PM (T-BACT)	Applicable PM emission standard for horsepower range based on Table 1: New Emergency Standby Diesel- Fueled CI Engines and Table 2: New Emergency Standby Direct-Drive Fire Pump Engines of the <u>ATCM for</u> <u>Stationary CI Engines</u> .	EPA, ARB, SMAQMD, SCAQMD ^(B) , SJVUAPCD ^(A) , SDAPCD, BAAQMD				

- On 6/30/2001, SJVUAPCD last updated their T-BACT standard for diesel PM. This standard requires direct-drive fire pump engines to meet a PM standard of 0.1 g/hp-hr (later clarified to be 0.149 g/bhp-hr). Subsequent to this (September 27, 2004), the Air Resources Board adopted the ATCM for stationary diesel engines. During the rulemaking process, ARB initially proposed 0.1 g/hp-hr as the standard, but eventually established the PM standards to be 0.15 g/hp-hr, which was discussed during a public workshop on April 4, 2002. Also subsequent to this, South Coast AQMD determined in their analysis on Rule 1470 (May 4, 2012) that, except in certain cases, due to NFPA requirements, requiring PM standards more stringent than the NSPS is cost prohibitive because manufacturers cannot justify different PM standards on fire pumps for such a small market. As a result Rule 1470 allows direct-drive fire pump engines to meet the NSPS standards, except when installed within 100 meters of a school. For these reasons, the District has determined that the PM standard of SJVUAPCD T-BACT Guideline 3.4.1 is not achieved in practice and therefore is not listed in the above table.
- SCAQMD Rule 1470 requires a more stringent PM emission standard for engines greater or equal to

BACT Determination I.C. Engine, Standby, Diesel-fueled March 1, 2018 Page 14 of 18

175 HP if the engine is going to be located within 50 meters from a sensitive receptor. The rule analysis states that cancer risk from emergency diesel engines could be as high as 11 per million for receptors within 50 meters of the release point. This is greater than the 10 in a million significance level for the SCAQMD. Therefore, SCAQMD justified the requirement that most new emergency-use diesel engines meet more stringent standards for PM when installed within 50 meters of a sensitive receptor. Rule 1470 is not considered achieved in practice for SMAQMD for the following reasons:

- It requires more stringent PM standards for engines ≥ 175 HP when installed within 50 meters from sensitive receptors because the cancer risk may exceed 10 in one million. SMAQMD does not allow a cancer risk in excess of 10 in one million.
- It allows operation of the engine for emergency purposes if the electrical operating reserves fall below 5% (Stage II). SMAQMD allows emergency operation only during unforeseeable power outages.
- It allows the use of the engine in Demand Response Programs (DRP). SMAQMD allows emergency operation only during unforeseeable power outages.

B. TECHNOLOGICALLY FEASIBLE AND COST EFFECTIVE (Rule 202, §205.1.b.):

Discussion

During the most recent rulemaking for updates to the Airborne Toxic Control Measure for Stationary Compression Ignition Engines (Title 17, Cal. Code. Regs., §93115 to §93115.15), ARB conducted a cost effectiveness analysis to determine if selective catalytic reduction (SCR) and/or diesel particulate filters (DPF) were technologically feasible and cost effective for emergency use applications (Initial Statement of Reasons for Proposed Rulemaking: Proposed Amendments to the Airborne Toxic Control Measure for Stationary Compression Ignition Engines, Appendix B, September 2010).

The analysis concluded that DPFs were technologically feasible with some additional operational and monitoring conditions. These conditions would include either operating the engine for additional hours to allow the filter to regenerate (Passive DPF) or regenerating the filter during scheduled down-time (Active DPF), and monitoring for backpressure, cold starts, and 30-minute idle sessions.

The analysis also concluded that SCR was technologically feasible, but had some additional challenges. Because standby engines routinely operate only for scheduled maintenance and testing, the engines do not operate more than 15-30 minutes, and do operate at no or low load. Because of this the exhaust would not likely reach the temperature (260 °C to 540 °C) required for the catalyst to function properly. To circumvent this problem, the engine would need to be operated with higher loads and in many cases for longer periods of time. This could be a challenge for most emergency standby applications as most businesses do not have load banks in house and would have to create a larger load on the engine to get the catalyst up to operational temperature.

Urea handling and maintenance is also an important consideration. Urea crystallization in the lines can cause damage to the SCR system and to the engine itself. Crystallization in the lines is more likely in emergency standby engines due to their periodic and low hours of usage. Urea also has a shelf life of approximately two years. This could increase the cost of operating a SCR for emergency standby engines since the low number of annual hours of operation experienced by most emergency standby engines could lead to urea expiration. The urea would then have to be drained and replaced, creating an extra maintenance step and an increased cost to the end user.

ARB staff determined that while, SCR systems may be technically feasible, there are significant

BACT Determination I.C. Engine, Standby, Diesel-fueled March 1, 2018 Page 15 of 18

operational hurdles to overcome before routine use of SCR on emergency standby engines is practical. This is because the majority of operating hours for emergency standby engines occur during short 15 to 30 minute maintenance and testing checks are at low engine loads. In most cases, the temperature needed for the SCR catalyst to function will not be reached during this operation and the SCR will not provide the expected NOx reductions.

ARB staff also reviewed the feasibility of requiring Tier 4 final engines in lieu of aftermarket treatment. ARB concluded that Tier 4 engines that rely on after-treatment technology for emergency standby applications will not be available from the original equipment manufacturers. Representatives from the Engine Manufacturer's Association (EMA) have indicated that it will not be economically viable for engine manufacturers to develop and maintain a Tier 4 emergency standby engine platform for California. At the time, ARB staff concluded that Tier 4 engines for emergency standby applications will not be available "off-the-shelf." Rather, each owner or operator will need to purchase a new Tier 2 or Tier 3 engines and then work with suppliers to retrofit the engine with a DPF and/or SCR to meet the Tier 4 emission standards for all pollutants. Subsequent to this "off-the-shelf" Tier 4 final engines have become available for emergency purposes, and the District determined that Tier 4 final engines are technologically feasible. The District reviewed some engine list prices and determined that these prices were generally in line with the prices listed in Appendix B.

Technologically Feasible Alternatives:

Any alternative basic equipment, fuel, process, emission control device or technique, singly or in combination, determined to be technologically feasible by the Air Pollution Control Officer.

The table below shows the technologically feasible alternatives identified as capable of reducing emissions beyond the levels determined to be "Achieved in Practice" as per Rule 202, §205.1.a.

voc	Tier 4 standard
NOx	Selective Catalytic Reduction (SCR) Tier 4 standard
SOx	No other technologically feasible option identified
PM10	Diesel Particulate Filter (DPF) Tier 4 standard
PM2.5	Diesel Particulate Filter (DPF) Tier 4 standard
СО	Tier 4 standard

Cost Effective Determination:

After identifying the technologically feasible control options, a cost analysis is performed to take into consideration economic impacts for all technologically feasible controls identified.

The District reviewed cost information from the September 2010 amendments to the Airborne Toxic Control Measure for Stationary Compression Ignition Engines and adjusted the assumptions to reflect permitted emissions for maintenance and testing (50 hr/year) and a 15-year life for the control equipment. The District concluded that conducting the cost analysis using 200 hours per year for total operation (maintenance, testing, and emergency use) was not representative of actual engine operation, since emergency use is not predictable or routine. Cost

BACT Determination I.C. Engine, Standby, Diesel-fueled March 1, 2018 Page 16 of 18

effectiveness for PM reductions from a Tier 4 interim or Tier 4 final are not presented below, since the cost increases due to controls were consistently higher than those for retrofitting. The results are presented in the below tables.

Cost-Effectiveness Associated with the Application of DPF and SCR on Emergency Standby Engines (50 hours/year)									
Regulatory			HP Range						
Scenario			50-174	175-749	750-1,206	1,207-1,999	>2,000		
	Average Horsep	ower:	112	462	978	1604	2630		
	Cost Increase	PM	\$4,300	\$17,600	\$37,200	\$60,900	\$99,900		
Scenario 1:	Controls (A)	NOx	N/A	N/A	N/A	N/A	N/A		
DPF Detrofit of	Emission Reductions (lb) (B)	PM	13	53	113	186	305		
Tier 2/3		NOx	N/A	N/A	N/A	N/A	N/A		
engine	Cost Effectiveness (\$/lb)	PM	\$333	\$331	\$329	\$328	\$328		
		NOx	N/A	N/A	N/A	N/A	N/A		
	Cost Increase	PM	\$4,400	\$18,200	\$38,500	\$63,100	\$103,400		
Scenario 2:	Due to Controls (A)	NOx	\$8,800	\$36,300	\$76,900	\$126,100	\$206,900		
DPF/SCR	Emission	PM	13	53	113	186	305		
Tier 2/3	(B)	NOx	161	666	2348	3677	6032		
engine	Cost	PM	\$341	\$342	\$341	\$340	\$339		
	(\$/lb)	NOx	\$55	\$54	\$33	\$34	\$34		

(A) Cost increases due to controls are from Table B-7 of the <u>Initial Statement of Reasons for Proposed</u> <u>Rulemaking: Proposed Amendments to the Airborne Toxic Control Measure for Stationary</u> <u>Compression Ignition Engines, Appendix B</u>, September 2010.

(B) Emission reductions have been adjusted from 31 hours/year of operation to 50 hours/year of operation.

Cost-Effectiveness Associated with Installing Tier 4 Final Emergency Standby Engines (50 hours/year)									
Regulatory				HP Range					
Scenario			50-174	175-749	750-1,206	1207-1,999	>2,000		
	Average Horsep	ower:	112	462	978	1604	2630		
Tier 4 Final Engine	Cost Increase (A)	NOx	\$28,000	\$85,008	\$156,480	\$248,465	\$328,750		
	Emission Reductions (Ib) (B)	NOx	161	666	2,348	3,677	6,032		
	Cost Effectiveness (\$/lb)	NOx	\$170	\$130	\$70	\$70	\$50		

(A) Cost increases due to controls are from Table B-7 of the <u>Initial Statement of Reasons for Proposed</u> <u>Rulemaking: Proposed Amendments to the Airborne Toxic Control Measure for Stationary</u> <u>Compression Ignition Engines, Appendix B</u>, September 2010.

(B) Emission reductions have been adjusted from 31 hours/year of operation to 50 hours/year of operation.

The above cost effectiveness numbers were converted from cost per pound to cost per ton for comparison to the District's cost effectiveness thresholds.

Cost-Effectiveness Associated with the Application of DPF and SCR on Emergency Standby Engines (50 hours/year)									
Regulatory				HP Range					
Scenario			50-174	175-749	750-1,206	1,207-1,999	>2,000		
	Average Horsepower:		112	462	978	1604	2630		
Scenario 1: DPF Retrofit of Tier 2/3 engine	Cost	PM	\$660,000	\$662,000	\$658,000	\$656,000	\$656,000		
	(\$/ton)	NOx	N/A	N/A	N/A	N/A	N/A		
Scenario 2: DPF/SCR	Cost Effectiveness (\$/ton)	PM	\$682,000	\$684,000	\$682,000	\$680,000	\$678,000		
Tier 2/3 engine		NOx	\$110,000	\$108,000	\$66,000	\$68,000	\$68,000		
Scenario 3: Tier 4 Final engine	Cost Effectiveness (\$/ton)	NOx	\$340,000	\$260,000	\$140,000	\$140,000	\$100,000		

As demonstrated above, SCR and DPF after treatment is not considered cost effective since both the cost effectiveness for reducing the pollutants exceeds the District's threshold of \$24,500 for NOx and \$11,400 for PM10.

BACT Determination I.C. Engine, Standby, Diesel-fueled March 1, 2018 Page 18 of 18

C. SELECTION OF BACT:

Based on the above analysis, BACT for VOC, NOx, SOx, PM10, and CO will remain at what is currently achieved in practice and BACT for PM2.5 will be set to be the same as for PM10.

BACT FOR I.C. ENGINES, STANDBY, DIESEL-FUELED						
Pollutant	Standard	Source				
VOC	Applicable NMHC + NOx emission standard for horsepower range based on Table 1: New Emergency Standby Diesel-Fueled CI Engines and Table 2: New Emergency Standby Direct-Drive Fire Pump Engines of the <u>ATCM for Stationary CI Engines</u> .	ARB, SMAQMD, SCAQMD, SJVUAPCD, BAAQMD				
NOx	Applicable NMHC + NOx emission standard for horsepower range based on Table 1: New Emergency Standby Diesel-Fueled CI Engines and Table 2: New Emergency Standby Direct-Drive Fire Pump Engines of the <u>ATCM for Stationary CI Engines</u> .	ARB, SMAQMD, SCAQMD, SJVUAPCD, BAAQMD				
SOx	Diesel fuel with a sulfur content no greater than 0.0015% by weight.	EPA, ARB, SMAQMD, SCAQMD, SJVUAPCD, SDAPCD, BAAQMD				
PM10	Applicable PM emission standard for horsepower range based on Table 1: New Emergency Standby Diesel-Fueled CI Engines and Table 2: New Emergency Standby Direct-Drive Fire Pump Engines of the <u>ATCM for Stationary CI Engines</u> .	ARB, SMAQMD, SCAQMD, SJVUAPCD, BAAQMD				
PM2.5	Applicable PM emission standard for horsepower range based on Table 1: New Emergency Standby Diesel-Fueled CI Engines and Table 2: New Emergency Standby Direct-Drive Fire Pump Engines of the <u>ATCM for Stationary CI Engines</u> .	SMAQMD; EPA				
со	Applicable CO emission standard for horsepower range based on Table 1: New Emergency Standby Diesel-Fueled CI Engines and Table 2: New Emergency Standby Direct-Drive Fire Pump Engines of the <u>ATCM for Stationary CI Engines</u> .	ARB, SMAQMD, SCAQMD, SJVUAPCD, BAAQMD

(A) Due to the large number of entries only determinations entered since 01/01/2013 are included in the above table.

(B) Process Code 17.110 includes Large Internal Combustion Engines (> 500 BHP) fueled using Fuel Oil (ASTM #1, 2, includes kerosene, aviation, diesel fuel.

(C) Process Code 17.210 includes Small Internal Combustion Engines (≤ 500 BHP) fueled using Fuel Oil (ASTM #1, 2, includes kerosene, aviation, diesel fuel.

Note: The above BACT determinations were compared to the emissions limits required by NSPS, Subpart III. The above emissions limits are the same as the NSPS, Subpart III requirements for the same model year and horsepower range. Therefore, the most stringent BACT is compliance with NSPS, Subpart III.

Review of BACT Determinations published by ARB

BACT Template Version 071315

List of DACT data main ations, much lish ad in	ADD's DACT Classing the suggestion of the second	
LIST OF BACIL determinations published in	ARB'S BAUL Clearinghouse for LU	Engines' Emergency' Compression Ignition'

Capacity	Source	Date	NOx	VOC	со	PM10	Notes:
764 BHP	SCAQMD	7/11/2001	6.19 g/hp-hr	0.03 g/hp-hr	0.37 g/hp-hr	0.04 g/hp-hr	CARB-certified emissions for this engine family (1CPXL15.8ERK) are (g/BHP-hr): NOx 6.19, ROG .03, CO 0.37, PM .04 Standard conditions for compression ignition engine used to drive emergency generator including: less than 199 hrs/yr operation, fuel sulfur less than 0.05% and EPA nonroad certified as evidenced by manufacturer tag.
685 BHP	SCAQMD	7/11/2001	4.17 g/hp-hr	0.07 g/hp-hr	0.52 g/hp-hr	0.07 g/hp-hr	CARB-certified emissions for this engine family (1CPXL15.8ESK) are (g/BHP-hr): NOx 4.17, ROG .07, CO 0.52, PM .07 Standard conditions for compression ignition engine used to drive emergency generator including: less than 199 hrs/yr operation, fuel sulfur less than 0.05% and EPA nonroad certified as evidenced by manufacturer tag. This engine meets EPA Tier 2 requirements for nonroad engine at 600<750 BHP, which became effective 1-1-2002
610 BHP	SCAQMD	7/11/2001	4.17 g/hp-hr	0.07 g/hp-hr	0.52 g/hp-hr	0.07 g/hp-hr	CARB-certified emissions for this engine family (1CPXL15.8ESK) are (g/BHP-hr): NOx 4.17, ROG .07, CO 0.52, PM .07 Standard conditions for compression ignition engine used to drive emergency generator including: less than 199 hrs/yr operation, fuel sulfur less than 0.05% and EPA nonroad certified as evidenced by manufacturer tag.

Capacity	Source	Date	NOx	voc	со	PM10	Notes:
536 BHP	SCAQMD	7/11/2001	4.8 g/hp-hr	N/A	2.6 g/hp-hr	0.15 g/hp-hr	The USEPA engine family to which this engine belongs has been certified to meet 2001 USEPA Tier 2 standards for non-road engines. For 300<600 BHP engine ratings in 2001, Tier 2 standards are (g/BHP-hr): (NOx+HC)<4.8, CO<2.6, PM<0.15. Standard conditions for compression ignition engine used to drive emergency generator including: less than 199 hrs/yr operation, fuel sulfur less than 0.05% and EPA nonroad certified as evidenced by manufacturer tag.
471 BHP	SCAQMD	7/11/2001	4.8 g/hp-hr	N/A	2.6 g/hp-hr	0.15 g/hp-hr	The USEPA engine family to which this engine belongs has been certified to meet 2001 USEPA Tier 2 standards for non-road engines. For 300<600 BHP engine ratings in 2001, Tier 2 standards are (g/BHP-hr): (NOx+HC)<4.8, CO<2.6, PM<0.15. Certified equipment permit. Standard conditions for the engine used to drive emergency generator including: <199 hrs/yr operation, fuel sulfur <0.05%, engine must be an EPA nonroad certified as evidenced by manufacturer tag.

Capacity	Source	Date	NOx	voc	со	PM10	Notes:
470 BHP	<u>SCAQMD</u>	12-1-2001	4.8 g/hp-hr	N/A	2.6 g/hp-hr	0.15 g/hp-hr	The USEPA engine family (1CEXL0661AAC) to which this engine belongs has been certified to meet 2001USEPA Tier 2 standards for non-road engines. For 300<600 BHP engine ratings, in 2001, Tier 2 standards are (g/BHP-hr): (NOx + HC) <4.8, CO <2.6, PM <0.15 Certified equipment permit. Standard conditions are: <199 hrs/yr operation, fuel sulfur <0.05%. Also, engine must be an EPA nonroad certified as evidenced by manufacturer tag.
395 BHP	<u>SCAQMD</u>	12-4-2001	4.8 g/hp-hr	N/A	2.6 g/hp-hr	0.15 g/hp-hr	The USEPA engine family (1CEXL0661AAC) to which this engine belongs has been certified to meet 2001USEPA Tier 2 standards for non-road engines. For 300<600 BHP engine ratings, in 2001, Tier 2 standards are (g/BHP-hr): (NOx + HC) <4.8, CO <2.6, PM <0.15 Certified equipment permit. Standard conditions are: <199 hrs/yr operation, fuel sulfur <0.05%. Also, engine must be an EPA nonroad certified as evidenced by manufacturer tag.
295 BHP	<u>SCAQMD</u>	11-21-2001	4.72 g/hp-hr	0.96 g/hp-hr	1.6 g/hp-hr	0.33 g/hp-hr	USEPA certified emissions for this engine family (1GNXL07.5FAA) are (g/BHP-hr): NOx 4.72, ROG 0.96, CO 1.6, PM 0.33 Certified equipment permit. Standard conditions are: <199 hrs/yr operation, fuel sulfur <0.05%. Also, engine must be an EPA nonroad certified as evidenced by manufacturer tag.

Capacity	Source	Date	NOx	VOC	со	PM10	Notes:
267 BHP	<u>SCAQMD</u>	11-21-2001	4.72 g/hp-hr	0.96 g/hp-hr	1.6 g/hp-hr	0.33 g/hp-hr	USEPA certified emissions for this engine family (1GNXL07.5FAA) are (g/BHP-hr): NOx 4.72, ROG 0.96, CO 1.6, PM 0.33. Certified equipment permit. Standard conditions are: <199 hrs/yr operation, fuel sulfur <0.05%. Also, engine must be an EPA nonroad certified as evidenced by manufacturer tag.
100 BHP	<u>SCAQMD</u>	10-7-1999	6.9 g/hp-hr	1 g/hp-hr	8.5 g/hp-hr	0.38 g/hp-hr	The engine shall not operate more than 200 hrs/yr. The engine timing be retard by 4 degrees relative to standard timing The emission data being reported by the engine manufacturer are: NOx: 6.808 grams/bhp-hr CO: 0.32 grams/bhp-hr ROG: 0.2 grams/bhp-hr PM10: 0.06 grams/bhp-hr
1448 BHP	<u>SCAQMD</u>	11-9-1999	6.9 g/hp-hr	1 g/hp-hr	8.5 g/hp-hr	0.38 g/hp-hr	200 hrs/yr and 4 degree timing retard
1109 BHP	SCAQMD	03-28-2000	6.9 g/hp-hr	1 g/hp-hr	8.5 g/hp-hr	0.38 g/hp-hr	NOx: 5.93 grams/bhp-hr CO: 0.71 grams/bhp-hr ROG: 0.03 grams/bhp- hrPM10: 0.109 grams/bhp-hr provided by engine manufacture. 200 hrs/yr operation
1480 BHP	SCAQMD	02-22-2000	6.9 g/hp-hr	1 g/hp-hr	8.5 g/hp-hr	0.38 g/hp-hr	The engine shall not operate more than 200 hrs/yr. The engine emissions, as provided by the engine manufacturer: NOx: 5.9 grams/bhp-hr CO: 0.6 grams/bhp-hr ROG: 0.3 grams/bhp-hr PM: 0.2 grams/bhp-hr

Capacity	Source	Date	NOx	VOC	СО	PM10	Notes:
883 BHP	<u>SCAQMD</u>	01-18-2000	6.9 g/hp-hr	1 g/hp-hr	8.5 g/hp-hr	0.38 g/hp-hr	The engine shall not operate more than 200 hrs/yr. The engine emissions, as provided by the engine manufacturer: NOx: 6.2 grams/bhp-hr CO: 0.9 grams/bhp-hr ROG: 0.25 grams/bhp-hr PM10: 0.247 grams/bhp-hr
2115 BHP	<u>SCAQMD</u>	02-01-2000	6.9 g/hp-hr	1 g/hp-hr	8.5 g/hp-hr	0.38 g/hp-hr	The engine shall not operate more than 200 hrs/yr. The engine emissions, as provided by the engine manufacturer: NOx: 6.2 grams/bhp-hr CO: 1.3 grams/bhp-hr ROG: 0.2 grams/bhp-hr PM10: 0.3 grams/bhp-hr
890 BHP	<u>SCAQMD</u>	03-30-2000	6.9 g/hp-hr	1 g/hp-hr	8.5 g/hp-hr	0.38 g/hp-hr	The engine shall not operate more than 200 hrs/yr. The engine emissions, as provided by the engine manufacturer: NOx: 5.77 grams/bhp-hr CO: 0.15 grams/bhp-hr ROG: 0.04 grams/bhp-hr PM10: 0.21 grams/bhp-hr
68 BHP	<u>SCAQMD</u>	08-18-1999	6.9 g/hp-hr	1 g/hp-hr	8.5 g/hp-hr	0.38 g/hp-hr	
2937 BHP	SBACPD	05-16-2006	4.5 g/hp-hr				Test data from EPA certification database for EPA Engine Family Name 6CPXL78.1E2T; Certified Tier 2 engine
2722 BHP	<u>SDAPCD</u>	07-09-2012	4 g/hp-hr				Tier 2 certified engine and 50 hr/yr for M&T No add-ons but certified engine includes a turbocharger, charge air cooler. SCR determined to be not technologically feasible.

Capacity	Source	Date	NOx	voc	со	PM10	Notes:
1881 BHP	SDAPCD	10-03-2011	3.9 g/hp-hr				Tier 2 certified engine, 50 hr/yr M&T limit; No add-on controls, but certified engine includes turbocharger and charge air cooler. SCR determined to be not technologically feasible. Propane or Natural gas fired engine not cost effective.
3634 BHP	<u>SDAPCD</u>	12-05-2011	3.5 g/hp-hr				Tier 2 certified engine and 50 hr/yr M&T limit; No add-on controls, but certified engine includes turbocharger and charge air cooler. SCR determined to be not technologically feasible. Propane or Natural gas fired engine not cost effective. Passed an AQIA for NO2 impacts.

- BACT standards are based on certification data for the engine family for that model year. The engine family was certified to meet Exhaust Emission Standards for Off-Road Compression Ignition Engines listed in Title 13, Cal. Code Regs., §2423, Table 1a.
- = BACT standards are based on certification data for the engine family for that model year. The engine family was certified to meet exhaust emission standards for Nonroad Compression Ignition Engines listed in 40 CFR §89.112.
- = Selected as the most stringent BACT determination achieved in practice.

Note: All three BACT determinations are for prime-use engines and are therefore not applicable to standby engines.
