## **BEST AVAILABLE CONTROL TECHNOLOGY DETERMINATION**

DETERMINATION	
NO.:	167
DATE:	9/12/17
ENGINEER:	Felix Trujillo, Jr.

Category/General Equip Description:	Screen
Equipment Specific Description:	Portable Greenwaste Trommel Screen
Equipment Size/Rating:	Small Emitter BACT (< 10 lb/day)/Minor Source
Previous BACT Det. No.:	None

This BACT was determined under the project for A/C's 25331 and 25332 (Zanker Road Resource Management, Ltd.).

#### **BACT ANALYSIS**

#### A: ACHIEVED IN PRACTICE (Rule 202, §205.1a)

The following control technologies are currently employed as BACT for portable greenwaste trommel screen operations:

BACT Determination Portable Greenwaste Trommel Screen September 12, 2017 Page 5 of 7

	SUMMARY OF ACHIEVED IN PRACTICE CONTROL TECHNOLOGIES					
Pollutant	Standard	Source				
voc	No Standard					
NOx	No Standard					
SOx	No Standard					
PM10	1. VEE < or equal to 5% Opacity; Water spray or adequate moisture of process materials	SJVAPCD				
	2. Water Spray w/ > 50% control efficiency	BAAQMD				
PM2.5	No Standard		· .			
со	No Standard					

The following control technologies have been identified and are ranked based on stringency:

The following control technologies have been identified as the most stringent, achieved in practice control technologies:

BEST CONTROL TECHNOLOGIES ACHIEVED				
Pollutant	Standard	Source		
voc	No Standard	· · · · ·		
NOx	No Standard			
SOx	No Standard	· · ·		
PM10	VEE < or equal to 5% Opacity; Water spray or adequate moisture of process materials	SJVAPCD		
PM2.5	No standard			
со	No Standard	· ·		

## B. TECHNOLOGICALLY FEASIBLE AND COST EFFECTIVE (Rule 202, §205.1.b.)

## Technologically Feasible Alternatives:

Any alternative basic equipment, fuel, process, emission control device or technique, singly or in combination, determined to be technologically feasible by the Air Pollution Control Officer. The table below shows the technologically feasible alternatives identified as capable of reducing emissions beyond the levels determined to be "Achieved in Practice" as per Rule 202, §205.1.a.

#### BACT Determination Portable Greenwaste Trommel Screen September 12, 2017 Page 6 of 7

Pollutant	Technologically Feasible Alternatives
voc	None identified
NOx	None identified
SOx	None identified
PM10	Baghouse
PM2.5	Baghouse
CO	None identified

This operation is a portable greenwaste trommel screen that will be moved throughout the processing area. The use of a baghouse requires electrical power. The engines on these types of equipment can only power the equipment that is associated with the manufactured unit and cannot power additional equipment such as baghouses (as explained in BACT 166 for a wood waste grinder). This BACT will also apply to facilities that don't own their own equipment. These facilities would be issued flex permits, that will allow them to use equipment from various third party contractors. The requirement of a baghouse. The greenwaste grinder is on wheels and can be easily moved from one location to another. The use of a baghouse would reduce the mobility of the equipment. There would also be a variation in the hp rating of the equipment, which may require a specific baghouse to be used with specific equipment. Therefore, it is not technologically feasible to use a baghouse with this type of portable equipment.

#### Using the PM10 BACT standard for PM2.5:

Since both, PM10 and PM2.5 trigger BACT at >0 lb/day and PM2.5 is a subset of PM10, BACT for PM2.5 will be triggered whenever BACT is triggered for PM10. Therefore, BACT for PM2.5 will be set to be the same as for PM10.

BACT Determination Portable Greenwaste Trommel Screen September 12, 2017 Page 7 of 7

## C. SELECTION OF BACT

Small emitter BACT (< 10 lb/day) & Minor Source BACT for a portable greenwaste trommel screen is the following:

BACT FOR PORTABLE GREENWASTE TROMMEL SCREEN				
Pollutant	Standard	Source		
VOC	No standard			
NOx	No standard			
SOx	No standard			
PM10	VEE < or equal to 5% Opacity; Water spray or adequate moisture of process materials	SJVAPCD		
PM2.5	VEE < or equal to 5% Opacity; Water spray or adequate moisture of process materials	SJVAPCD		
CO	No standard

## San Joaquin Valley Unified Air Pollution Control District

# Best Available Control Technology (BACT) Guideline 6.4.1\*

#### Last Update: 04/03/1998

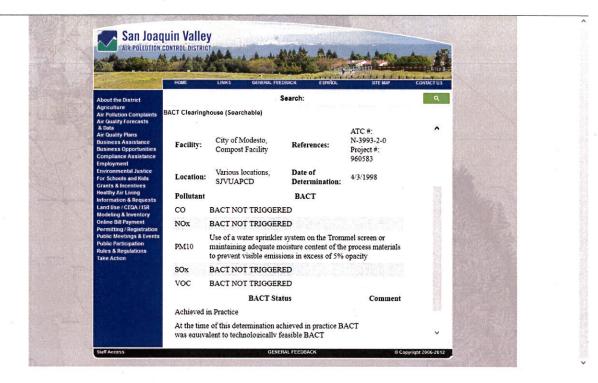

#### Composted Materials - Screening, Transportable, Wood Waste Processing

Pollutant	Achieved in Practice or	Technologically	Alternate Basic
	contained in the SIP	Feasible	Equipment
PM10	Use of a water sprinkler system or maintaining adequate moisture content of the process materials to prevent visible emissions in excess of 5% opacity		

BACT is the most stringent control technique for the emissions unit and class of source. Control techniques that are not achieved in practice or contained in s a state implementation plan must be cost effective as well as feasible. Economic analysis to demonstrate cost effectiveness is required for all determinations that are not achieved in practice or contained in an EPA approved State Implementation Plan.
