

DEFINITIONS -- ADHESIVES AND SEALANTS PRODUCTS TYPE

As stated in Sacramento Metropolitan Air Quality Management District Rule 460

COATING TYPE	DEFINITION
Acrylonitrile-Butadiene Styrene (ABS) Welding Adhesive	Any adhesive intended by the manufacturer to weld acrylonitrile-butadiene-styrene (ABS) pipe. ABS pipe is made by reacting monomers of acrylonitrile, butadiene, and styrene and is normally identified with an ABS marking.
Adhesive	Any substance that is used to bond one surface to another surface by attachment.
Adhesive or Sealant Product	Any adhesive, adhesive primer, aerosol adhesive, aerosol adhesive primer, sealant, or sealant primer, as sold by the manufacturer or as applied.
Adhesive Primer	A coating applied to a substrate, prior to the application of an adhesive, to provide a bonding surface.
Aerosol Adhesive/Aerosol Adhesive Primer	An adhesive or adhesive primer consisting of a mixture of rubber, resins, liquid and/or gaseous solvents, and propellants packaged in a hand-held, pressurized, non-refillable container. The container expels pressurized aerosol materials in a finely divided spray when a valve on the container is depressed.
Aerosol Cleaning Solvent	A material used as a surface preparation solvent, a cleanup solvent, or as a stripper and consisting of liquid and/or gaseous solvent and propellants packaged in a hand-held, pressurized, non-refillable container. The container expels pressurized aerosol materials in a finely divided spray when a valve on the container is depressed.
Architectural Sealant/Primer	Any sealant or sealant primer intended by the manufacturer to be applied to stationary structure, including mobile homes, and their appurtenance. Appurtenances to a structure include, but are not limited: hand railings, cabinets, bathroom and kitchen fixtures, fences, rain gutters and downspouts, and windows.
Ceramic Tile Installation Adhesive	Any adhesive intended by the manufacturer for the installation of ceramic tiles.
Chlorinated Polyvinyl Chloride (CPVC) Welding Adhesive	Any adhesive intended by the manufacturer to weld CPVC plastic pipe.
Cleanup Solvent	A VOC-containing material used to: <ol style="list-style-type: none"> 1. Remove loosely held uncured (i.e., not dry to the touch) adhesive or sealant from a substrate, or 2. Clean equipment used in applying an adhesive or sealant product.
Computer Diskette Jacket manufacturing Adhesive	Any adhesive intended by the manufacturer to bond the fold-over flaps to the body of a vinyl computer diskette jacket.
Contact Adhesive	An adhesive that forms an instantaneous bond that cannot be repositioned when substrates, on which the adhesive is applied and allowed to dry, are brought together using momentary pressure.

DEFINITIONS - ADHESIVES AND SEALANTS PRODUCTS OPERATIONS (CONTINUED)

COATING TYPE	DEFINITION
Contact Adhesives-Specialty Substrates	An adhesive that is intended by the manufacturer to be used for bonding of nonporous substrates to each other, the bonding of decorative laminate in postforming application, or for the bonding of decorative laminate to metal, melamine-covered board, or curved surfaces, or when used to bond any substrate to metal, rubber, rigid plastic, or wood veneer not exceeding 1/16" in thickness.
Cove Base Installation Adhesive	Any adhesive intended by the manufacturer for the installation of cove base (or wall base), which is generally made of vinyl or rubber, onto a wall or vertical surface at floor level.
Indoor Floor Covering Installation Adhesive	Any adhesive intended by the manufacturer for the installation of wood flooring, carpet, carpet pads, rubber flooring, resilient tile, vinyl tile, vinyl backed carpet, resilient sheet and roll, or artificial grass. Such installed materials are in an enclosure and are not exposed to ambient weather conditions during normal use. Indoor floor covering installation does not include ceramic tile installation or subfloor installation.
Marine Deck Sealant/Sealant Primer	Any sealant or sealant primer intended by the manufacturer to seal gaps on wooden marine decks.
Metal To Urethane/Rubber Molding or Casting Adhesive	An adhesive intended by the manufacturer to bond metal to high-density or elastomeric urethane or molded rubber materials, in heater molding or casting processes, to fabricate products such as rollers for computer printers or other paper handling equipment.
Multipurpose Construction Adhesive	Any adhesive primer intended by the manufacturer for the installation or repair of various construction materials, including, but not limited to, drywall, subfloor, panel, fiberglass reinforced plastic, ceiling tile, and acoustical tile.
Non-Membrane Roof Installation/Repair Adhesive/ Sealant	Any adhesive or sealant intended by the manufacturer for the installation or repair of non-membrane roofs, but is not intended for the installation of prefabricated single-ply roof membrane. With regard to non-membrane roof installation/repair adhesives, the category includes plastic or asphalt roof cement, asphalt roof coating, and cold application installation.
Outdoor Floor Covering Installation Adhesive	Any adhesive intended by the manufacturer for the installation of floor covering that is not an enclosure and is exposed to ambient weather conditions during normal use. Outdoor floor covering installation does not include ceramic tile installation or subfloor installation.
Plastic Cement Welding Adhesive	Any adhesive made of resins and solvents that is formulated to dissolve the surfaces of plastic to form a bond between mating surfaces.

DEFINITIONS - ADHESIVES AND SEALANTS PRODUCTS OPERATIONS (CONTINUED)

COATING TYPE	DEFINITION
Plastic Cement Welding Adhesive Primer	Any primer intended by the manufacturer to prepare plastic substrates prior to bonding or welding.
Polyvinyl Chloride (PVC) Welding Adhesive	Any adhesive intended by the manufacturer to weld PVC plastic pipe.
PVC Welding Sealant	A sealant designed to adhere to polyvinyl chloride (PVC) by dissolving its surface and to fill or seal gaps between PVC surfaces or between PVC and other surfaces.
Roadway Sealant	Any sealant intended by the manufacturer to be applied to public streets, highways, and related surfaces such as curbs, berms, driveways, and parking lots.
Sealant	Any material with adhesive properties that is applied as a rope or bead and that is formulated for use primarily to fill, seal, waterproof, or weatherproof gaps or joints between two surfaces.
Sealant Primer	Any material intended by the manufacturer for application to a substrate, prior to the application of a sealant, to enhance the bonding surface.
Stripper	A liquid used to remove cured adhesives and/or cured sealants.
Structural Glazing Adhesive	Any adhesive intended by the manufacturer to adhere glass, ceramic, metal, stone, or composite panels to exterior building frames.
Surface Preparation Solvent	Any VOC-containing material used to remove contaminants such as dust, soil, oil, grease, etc., from a substrate prior to the application of an adhesive or sealant product.
Thin Metal Laminating Adhesive	Any adhesive intended by the manufacturer to bond multiple layers of metal to metal or metal to plastic in which the thickness of the bond line(s) is less than 0.025 mils.
Tire Retread Adhesive	Any adhesive applied to the back of precured tread rubber and to the casing and cushion rubber. Tire retread adhesive may also be used to seal buffed tire casings to prevent oxidation while the tire is being prepared for a new tread.
Traffic Marking Tape Adhesive Primer	<p>An adhesive primer intended by the manufacturer to be applied to surfaces prior to the installation of traffic marking tape.</p> <ol style="list-style-type: none"> 1. Traffic marking tape adhesive primer is not one of the coatings included in the definition of "traffic coatings" in Rule 442-ARCHITECTURAL COATINGS. 2. Traffic marking tape is a preformed reflective film intended by the manufacturer to be applied to public streets, highways, and other surfaces including, but not limited to, curbs, berms, driveways, and parking lots.
